Exploring the Vertebrate Central Cholinergic Nervous System Alexander G. Karczmar, 2007-04-05 Even if the weapons of mass destruction WMD and among them stocks of organophosphorus OP agents also referred to as war gases and nerve gases were not found in Iraq following the US Iraq war the relative ease with which these substances can be made from harmless precursors and the low cost of their manufacture will continue to fascinate power hungry ruthless dictators as well as multinational and international terrorists particularly as the close relationship between the OP agents and useful insecticides makes it easy to disguise the importation and purchase of small amounts of the precursors Indeed the use by Saddam Hussein of a nerve gas against the Kurds and his possible employment of the OP agents during his war with Iran and the Sarin attack in the Tokyo underground by an extremist religious sect magnetized the world with respect to the OP drugs As these drugs exert their toxicity via their cholinergic action on the nervous particularly central nervous system it is no wonder that the research in the cholinergic field attracts and merits our intense attention These considerations underlie the significance of this book as Alex Karczmar devotes an entire chapter of Exploring the Vertebrate Central Cholinergic Nervous System to anticholinesterases antiChEs and as he is an acknowledged expert in the field of cholinergic toxicity as well as a consultant to the Surgeon General of the U S Army
