

DNA Structure and Replication

(I have a question before we start our lecture)

Why?

Why do we need to study DNA structure and replication? To understand the genetic information and how it is passed on from one generation to the next. Replication is the process by which a cell makes a copy of its DNA. This is essential for cell division and growth.

Question 1: What is the structure of DNA?

1. What is the structure of DNA?

- What are the components of a nucleotide?
- What are the components of a double helix?

The book underscores the importance of intellectual humility, acknowledging that our current understanding is always incomplete and subject to change. The book delves into contemporary challenges like the mysteries of dark matter and dark energy, connecting scientific concepts with philosophical insights. By exploring the history of science and examining the evolution of knowledge, the book highlights the often contentious process by which new scientific ideas gain acceptance. This journey progresses across chapters beginning with core concepts, then moving through historical examples and contemporary scientific challenges, before discussing practical implications. Ultimately, *Scientific Truths* offers a framework for understanding the dynamic interplay between scientific discovery and our perception of reality. It encourages readers to embrace the provisional nature of scientific truth, fostering a more open and adaptable approach to problem solving and knowledge acquisition applicable in education, policy making, and our approach to global challenges.
