phenomenology The central message of QBism is that quantum probabilities must be interpreted as the experiencing agent's personal Bayesian degrees of belief degrees of belief for the consequences of their actions on a quantum system The chapters in this volume elaborate on whether and specify how phenomenology could serve as the philosophical foundation of QBism This objective is pursued from the perspective of QBists engaging with phenomenology as well as the perspective of phenomenologists engaging with QBism These approaches enable us to realize a better understanding of quantum mechanics and the world we live in achieve a better understanding of QBism and introduce the phenomenological foundations of quantum mechanics Phenomenology and QBism is an essential resource for researchers and graduate students working in the philosophy of physics philosophy of science quantum mechanics and phenomenology
