

B) Internal Static Bypass Line

FIGURE 1.2 Single Line Diagram- Bypass Operation. Load fed through static bypass line.

Referring to Figure 1.2, the Internal Static Bypass line is a Hard wired line through Static Transfer Switch which supplies the critical load with unconditioned input power. The purpose of this line is to route power to the critical load while the UPS module is de-energized during Start-up before the system is fully operational.

The internal control system determines the operation of the two paths, with the load powered from the inverter being the normal operation.
