Problem 7

QPR is the common tangent to both circles at P. EDRC is a tangent to the smaller circle at C.

12.1 Name, with reasons, **FOUR** \angle s equal to x . (7)

12.2 Show that $E\hat{P}A = x + y$ (4)

12.3 Determine the numerical value of $x + y$,
if DCTP is a cyclic quad (4)

12.1 $\hat{C}_2 = x$ (Alt. \angle s)

$\hat{P}_1 = x$ (tan - chord)

$\hat{P}_5 = \hat{P}_1 = x$ (Vert opp \angle s)

$\hat{E} = x$ (\angle s in same seg.)

12.2 $\hat{D}_1 = \hat{C}_1 + \hat{C}_2$ (Corresp. \angle s)

$\hat{D}_1 = y + x$

$E\hat{P}A = \hat{D}_1 = y + x$ (\angle s in same seg.)

12.3 $\hat{P}_2 = y$ ($RP = RC$, tans from same point)

$\hat{P}_3 = E\hat{P}A = x + y$ (Vert. opp \angle s)

$x + y + (x + y) + (x + y) = 180^\circ$ (opp \angle s of cyclic quad)

$3x + 3y = 180^\circ \quad \therefore x + y = 60^\circ$

NASA Thesaurus ,1988 **Ball Cap Nation** Jim Lilliefors,2009-09-01 As the country grows increasingly diverse and complicated Americans seek and occasionally find a common thread to unite them And as Jim Lilliefors reveals in his new book that common thread is what the baseball cap is made of indeed what has transformed it into America s National Hat As fads go it s no longer even a fad but a part of the national identity that for better or worse is a symbol of America It feeds an illusion that Americans cherish that despite their differences and no matter what position they play when wearing a baseball cap they re all part of the same team Exploring every aspect of caps and their culture including the history manufacturing and evolution of baseball caps collecting and caring for caps cap etiquette and even cap urban legends and packed with photos throughout *Ball Cap Nation* is a delightful look at a uniquely American phenomenon *Hidden Harmony—Geometric Fantasies* Umberto Bottazzini,Jeremy Gray,2013-06-21 This book is a history of complex function theory from its origins to 1914 when the essential features of the modern theory were in place It is the first history of mathematics devoted to complex function theory and it draws on a wide range of published and unpublished sources In addition to an extensive and detailed coverage of the three founders of the subject Cauchy Riemann and Weierstrass it looks at the contributions of authors from d Alembert to Hilbert and Laplace to Weyl Particular chapters examine the rise and importance of elliptic function theory differential equations in the complex domain geometric function theory and the early years of complex function theory in several variables Unique emphasis has been devoted to the creation of a textbook tradition in complex analysis by considering some seventy textbooks in nine different languages The book is not a mere sequence of disembodied results and theories but offers a comprehensive picture of the broad cultural and social context in which the main actors lived and worked by paying attention to the rise of mathematical schools and of contrasting national traditions The book is unrivaled for its breadth and depth both in the core theory and its implications for other fields of mathematics It documents the motivations for the early ideas and their gradual refinement into a rigorous theory **Some questions of differential geometry in the large** E. V. Shikin,1996-07-16 This collection contains articles that present recent results by geometers in Russia and the Ukraine Papers in the collection deal with various questions related to the structure symmetries and embeddings of submanifolds in Euclidean and pseudo Euclidian spaces This collection offers a review of the challenges facing specialists in geometry in the large and features current research in the field *Non-Euclidean Geometry* Roberto Bonola,1912 Examines various attempts to prove Euclid s parallel postulate by the Greeks Arabs and Renaissance mathematicians Ranging through the 17th 18th and 19th centuries it considers forerunners and founders such as Saccheri Lambert Legendre W Bolyai Gauss Schweikart Taurinus J Bolyai and Lobachewsky *Non-Euclidean Geometry* Roberto Bonola,2007-05-01 Examines various attempts to prove Euclid s parallel postulate by the Greeks Arabs and Renaissance mathematicians It considers forerunners and founders such as Saccheri Lambert Legendre W Bolyai Gauss others Includes

Thomas Q. Sibley,2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid s first book and a high school axiomatic system as well as Hilbert s axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software **NASA Thesaurus Alphabetical Update** ,1971 **Maths Handbook & Study Guide Grade 12: Teacher's**

Holographic Duality in Condensed Matter Physics Jan Zaanen, Yan Liu, Ya-Wen Sun, Koenraad Schalm, 2015-11-05 A pioneering treatise presenting how the new mathematical techniques of holographic duality unify seemingly unrelated fields of physics This innovative development morphs quantum field theory general relativity and the renormalisation group into a single computational framework and this book is the first to bring together a wide range of research in this rapidly developing field Set within the context of condensed matter physics and using boxes highlighting the specific techniques required it examines the holographic description of thermal properties of matter Fermi liquids and superconductors and hitherto unknown forms of macroscopically entangled quantum matter in terms of general relativity stars and black holes Showing that holographic duality can succeed where classic mathematical approaches fail this text provides a thorough overview of this major breakthrough at the heart of modern physics The inclusion of extensive introductory material using non technical language and online Mathematica notebooks ensures the appeal to students and researchers alike
