

# What are the Laws of Exponents?

Laws of exponents provide us with rules for simplifying calculations or expressions involving powers of the same base. This means that the larger number or letter must be the same.

There are several laws of exponents (sometimes called exponent laws or rules of exponents), but this page will cover product rule, quotient rule, and negative exponent rule.

## 1. Power of a product rule: multiplying exponents

When multiplying exponents with the same base, add the powers.

$$a^m \times a^n = a^{m+n}$$

## 2. Power of a quotient rule: dividing exponents

When dividing exponents with the same base, use subtraction to subtract the powers.

$$a^m \div a^n = a^{m-n}$$

## 3. Negative exponent rule

When the exponent is a negative number, put it over 1 and flip (write its reciprocal) to make it positive.

$$a^{-m} = \frac{1}{a^m}$$
