

CONTINGENCY TABLES

A contingency table is a tabular display that subdivides data, often into "male" and "female" and often looking at how many of each do X and how many of each do Y and so on.

The rows and columns are usually totalled. The number in the lower right corner of the table tells us the value of n , the total sample size.

We can read many different probabilities using the information in a contingency table.

Example 1

A survey was done to see how many Grade 8 students owned an iPad. The results are shown in the contingency table below.

	Owens an iPad	Doesn't own an iPad	TOTAL
Male	7	4	11
Female	3	6	9
TOTAL	10	10	20

Notice that the rows and columns both total to 20. This means that a total of 20 students participated in the survey.

When reading probabilities, the most important thing is to identify the correct sample space.

- The probability that a randomly selected student is male = $\frac{11}{20}$
- The probability that a randomly selected male student owns an iPad = $\frac{7}{11}$

Worksheet 24: Contingency tables

- A tournament organiser conducted a survey among 100 members of Paradise Sports Club to find out whether they play darts or not. The results are shown in the table below.

	Playing darts	Not playing darts	TOTAL
Male	30	40	70
Female	24		
TOTAL	54	46	100

- Complete the table by filling in the missing values.

- What is the probability that a member selected at random:

- Is female.

- Is male.

- Is female and plays darts.

- Is male and does not play darts.
