Navigating World History P. Manning, 2003-05-15 World history has expanded dramatically in recent years primarily as a teaching field and increasingly as a research field Growing numbers of teachers and Ph Ds in history are required to teach the subject They must be current on topics from human evolution to industrial development in Song dynasty China to today s disease patterns and then link these disparate topics into a coherent course Numerous textbooks in print and in preparation summarize the field of world history at an introductory level But good teaching also requires advanced training for teachers and access to a stream of new research from scholars trained as world historians In this book Patrick Manning provides the first comprehensive overview of the academic field of world history He reviews patterns of research and debate and proposes guidelines for study by teachers and by researchers in world history

Economics versus Reality John Legge, 2017-09-08 John M Legge shows the many ways in which the real world diverges from economics textbooks He argues that mainstream economic theory took a disastrous turn 140 years ago when it attempted to use calculus to explain human behaviour A real economy involves people who are not variables in equations This error led to a

second mainstream economics becoming obsessed with equilibrium However constant change is the reality and one cannot explain the present without understanding the path taken to get here This book presents economics in historical context It includes a short account of the contributions by some of the key figures in economic theory starting with Adam Smith Smith placed great weight on morality he believed that economic activity took place in a society and could not be justified except insofar as it advanced the interests of that society Too many economists have come to believe that the interests of society can be measured by a number that if a policy change raises GDP it is justified whatever its impact on people Legge places the economy within society and society within the environment explaining that every significant decision has a social and environmental impact as well as an economic dimension Seeking to provide answers to students professional business managers and those interested in the political process this work addresses the gap between theory and reality

Goodwin, Alessandro Vercelli, 2012-12-06 1 The Idea behind the workshop was that of calling attention to the necessity of studying long term tendencies In economic growth We believe that actual growth processes In capitalistic economies are not smooth phenomena and also that the evolution of the economy Is characterized by long term fluctuations as well as by trade cycles It Is now common place to argue that this point of view was revived after 1973 In consequence of the economic difficulties experienced by Industrialized countries while It has a much older origin as Its roots can be pushed back at least to the Great Depression of the 1930 s In preparing this workshop we selected two main approaches as reflected In the title of this book that have been proposed In the last ten years to deal with the causes of long term fluctuations namely the technological or neo Schumpeterian Approach and the social approach What follows Is simply a rough characterization of the existing theoretical positions and It Is not meant to be an exhaustive one The Interested reader will Immediately see that there are many differentiated positions by looking at the arguments contained In each contribution
