- Install the unit securely in a place which can bear the weight of the unit. When installed in an insufficient strong place, the unit could fall causing injury.

- Do not use intermediate connection of the power cord in the extension cord and do not connect multiple devices to one AC outlet. A fault could cause a fire or an electric shock due to defective contact, defective insulation, exceeding the permitted current, etc.
- Check that the refrigerant gas does not leak after installation has completed. If refrigerant gas leaks indoors, and comes into contact with the fire (for example, space heater, stove, etc.), harmful substances will be generated.
- Perform the installation securely referring to the installation manual. Incomplete installation could cause a personal injury due to fire, electric shock, the unit falling or leakage of water.

- Do not install the unit in a place where an inflammable gas leaks. If gas leaks and accumulates in the area surrounding the unit, it could cause an explosion.
- Tighten a flare nut with a torque wrench as specified in this manual. When tightened too tight, a flare nut may break after a long period and result in leakage of refrigerant.
- Install an earth-leakage protection depending on the installation place where it is human. If a earth-leakage breaker is not installed, it could cause an electric shock.
- Perform the drain-piping work securely according to the installation manual. If there is a defect in the drain-piping work, water could drip from the unit and a defective part could be wet and damaged.
