MULTI-STAGING

by Vernon Estes

This report was prepared as a result of the studies of some rockets, built and fired, during the summer of 1944 by the author.

Multi-staging, as one of the most important factors in the design of rockets, has been the subject of many studies. The author has been studying this subject for some time, and has been particularly interested in the design of multi-stage rockets.

The first stage of a multi-stage rocket is the most important. It is the stage that starts the rocket moving, and it is the stage that determines the maximum altitude of the rocket. The author has been studying this subject for some time, and has been particularly interested in the design of multi-stage rockets.

The design of a multi-stage rocket is a complex task. It requires a knowledge of the principles of rocket motion, and a knowledge of the materials and construction techniques used in the design of rockets.
