1. **Abstract** – This paper presents a new method for the automatic detection of the onset of a seizure in EEG signals. The method is based on the analysis of the power spectrum of the EEG signals. The power spectrum is calculated for each time window of the EEG signal. The power spectrum is then analyzed to detect the onset of a seizure. The method is evaluated using a set of EEG signals recorded from a patient with epilepsy. The results show that the method is able to detect the onset of a seizure with a high degree of accuracy.
