

The qualitative research cycle

According to Cutcliffe and Harder (2009), qualitative research cycle involves three cycles that are interlinked. They include the design cycle, the ethnographic cycle and the analytic cycle. The design cycle is the first of the qualitative research cycle and consists of some tasks viz: forming the research question, reviewing of literature and integrating theory, developing the conceptual study framework and choosing the right approach for fieldwork (Cutcliffe & Harder 2009). The ethnographic cycle describes the critical tasks in qualitative collection of data, that is, the design of the instrument for research, recruiting of participants, collection of data and making inferences that are inductive (Cutcliffe & Harder, (2009). Finally, the analytic cycle comprises the significant tasks of qualitative analysis of data. These include development of codes, describing and comparing, categorizing data, conceptualizing data and developing the theory. The tasks are closely interconnected and are repeated throughout the process of analysis. This tasks are done simultaneously at various points during the analysis (Cutcliffe & Harder, 2009).

Why people carry out qualitative research

Qualitative research is not entirely the solution to research, but there are several reasons as to why people take on qualitative research. Clark (2010) presented some of the reasons through examination of researchers' understanding of the supporting mechanisms which facilitate and motivate engagement in research (Clark, 2010). The supporting mechanisms stated include curiosity, subjective interest, social comparison, economic interest, material interest, introspective interest, enjoyment and subjective interest. Other mechanisms include political empowerment, representation and informing change (Clark, (2010). These exist at a collective level. By engaging in qualitative research, the researchers get an opportunity to express themselves, get satisfied from sharing the important events that happen in their lives, they satisfy their curiosity, and they get led to useful and helpful insights (Ford, 2009).

In addition, the motivating factors for engagement in the research were suggested to be the need to develop research skills, the drive to promote research mindedness and the desire to assist service development (Ford, 2009). However, these need more empirical investigation to boost their grounds. This is because the motivations for different researchers differ. The mechanisms and drivers of research engagement help in supporting the relationships of research in the field. According to Ford (2009), most research works are carried out to contribute to the career of the researcher, to avoid negative outcomes by managing risk, and to accomplish the prerequisites of funding agencies. However, these alone do not support the continual engagement for the researchers.
