Bransford,2013-10-11 During the past decade members of the Cognition and Technology Group at Vanderbilt University have worked with hundreds of teachers and thousands of students throughout North America in the context of the Adventures of Jasper Woodbury problem solving series 12 videodisc based adventures plus video based analogs extensions and teaching tips designed to improve the mathematical thinking of students from grades 5 and up and to help them make connections to other disciplines such as science history and social studies The experience of developing the Jasper series testing it in classrooms and re designing it based on feedback provided The Cognition and Technology Group at Vanderbilt with extraordinarily rich opportunities to learn from teachers students parents administrators and other community members This book was written for two reasons First it helped the authors to organize the thoughts and experiences of over 70 members of

the Learning Technology Center who worked on the Jasper project and to collaboratively reflect on their experiences and relate them to the broader literature in cognition and instruction Second this book gives others a change to learn from the experiences of the Cognition and Technology Group at Vanderbilt The book is anchored around their experiences with Jasper but the issues explored are relevant to any attempt to improve educational practice This book tells a coherent story that helps readers explore issues of curriculum instruction assessment and teacher learning professional development within a single context Jasper and how all these topics are interrelated It also helps readers see the relevance of research programs for improving educational practice Throughout the need for maintaining a balance of laboratory and classroom research is emphasized
