Brennan, 2013-11-11 In 1972 a monograph by Cronbach Gleser Nanda and Rajaratnam was published entitled *The Dependability of Behavioral Measurements* That book incorporated systematized and extended their previous research into what came to be called generalizability theory which liberalizes classical test theory in part through the application of analysis of variance procedures that focus on variance components Generalizability theory is perhaps the most broadly defined measurement model currently in existence and the Cronbach et al 1972 treatment of the theory represents a major contribution to psychometrics However as Cronbach et al 1972 p 3 state their book is complexly organized and by no means simple to follow and of course it is nearly 30 years old In 1983 ACT Inc published my monograph entitled *Elements of Generalizability Theory* with a slightly revised version appearing in 1992 That treatment is considerably less comprehensive than Cronbach et al 1972 but still detailed enough to convey much of the richness of the theory and to facilitate its application However the 1983 1992 monograph is essentially two decades old it does not cover multivariate generalizability theory in depth and it does not incorporate recent developments in statistics that bear upon the estimation of variance components Also of course there have been numerous developments in generalizability theory in the last 20 years      *The Use and Interpretation of Educational Tests* Harry Andrew Greene, Albert Nels Jorgensen, 1929      **The Educational Record** Samuel Paul Capen, Charles Riborg Mann, George Frederick Zook, 1928 One number annually includes the annual report of the President of the American Council on Education      **Bibliography of Research Studies in Education**, 1936      **Bulletin**, 1963      Statistics of Land-grant Colleges and Universities United States. curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research
