the reader how to combine the coded outcomes on individual test items into a numerical summary about the examinee's performance This book is intended for researchers and students in education and other social sciences interested in educational assessment and policy the design and development of tests and the procedures for test administration and scoring Prerequisites include an introduction to educational and psychological measurement and basic statistics Knowledge of differential and integral calculus and matrix algebra is helpful but not required *University of Illinois Bulletin*, 1922

Logo Recognition Jingying Chen, Lizhe Wang, Dan Chen, 2018-10-08 Used by companies organizations and even individuals to promote recognition of their brand logos can also act as a valuable means of identifying the source of a document E business applications can retrieve and catalog products according to their logos Governmental agencies can easily inspect goods using smart mobile devices that use logo recognition techniques However because logos are two dimensional shapes of varying complexity the recognition process can be challenging Although promising results have been found for clean logos they have not been as robust for noisy logos Logo Recognition Theory and Practice is the first book to focus on logo recognition especially under noisy conditions Beginning with an introduction to fundamental concepts and methods in pattern and shape recognition it surveys advances in logo recognition The authors also propose a new logo recognition system that can be used under adverse conditions such as broken lines added noise and occlusion The proposed system introduces a novel polygonal approximation a robust indexing scheme and a new line segment Hausdorff distance LHD matching method that can handle more distortion and transformation types than previous techniques In the first stage raw logos are transformed into normalized line segment maps In the second stage effective line pattern features are used to index the database to generate a moderate number of likely models In the third stage an improved LHD measure screens and generates the best matches A comprehensive overview of logo recognition the book also presents successful applications of the technology and suggests directions for future research
