on disseminating the latest scientific results rather than providing in depth education in the field of optical chemical sensors In addition the topic of optical chemical sensors is only just beginning to find its way into the curricula of universities and colleges in Europe and in the US Due to the prominence that optical sensors are assuming it has become more and more important to establish a framework for discussion and interchange in addition to traditional conferences to aid research and education in this important field In the summer of 2004 the NATO A S I on the subject Optical Chemical Sensors was organised in Erice Sicily This NATO A S I was th the 40 Course of the International School of Quantum Electronics under the auspices of the Ettore Majorana Foundation and Center for Scientific Culture and was directed by Dr J Homola of the Institute of Radio Engineering and Electronic IREE of the Academy of Sciences in Prague and by Dr F Baldini of the Nello Carrara Institute of Applied Physics IFAC CNR

The Practical Use of Fracture Mechanics D. Broek,2012-12-06 This book is about the use of fracture mechanics for the solution of practical problems academic rigor is not at issue and dealt with only in as far as it improves insight and understanding it often concerns secondary errors in engineering Knowledge of ignorance of such basic input as loads and stresses in practical cases may cause errors far overshadowing those introduced by shortcomings of fracture mechanics and necessary approximations this is amply demonstrated in the text I have presented more than three dozen 40 hour courses on fracture mechanics and damage tolerance analysis so that I have probably more experience in teaching the subject than anyone else I learned more than the students and became cognizant of difficulties and of the real concerns in applications In particular I found how a subject should be explained to appeal to the practicing engineer to demonstrate that his practical problem can indeed be solved with engineering methods This experience is reflected in the presenta tions in this book Sufficient background is provided for an understanding of the issues but pragmatism prevails Mathematics cannot be avoided but they are presented in a way that appeals to insight and intuition in lieu of formal derivations which would show but the mathematical skill of the writer

Learning Through Teaching Mathematics Roza Leikin,Rina Zazkis,2010-04-10 The idea of teachers Learning through Teaching LTT when presented to a na ve bystander appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn As evident in this book the experience of teaching presents teachers with an exciting opp tunity for learning throughout their entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT is acknowledged by multiple researchers and mathematics educators In the rst chapter Leikin and Zazkis review literature that recognizes this

phenomenon and stress that only a small number of studies attend systematically to LTT p cesses The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning *El-Hi Textbooks & Serials in Print, 2003 ,2003*
