

SESSION 1: WINDS AND GLOBAL CIRCULATION

KEY CONCEPTS:

In this session we will look at:

- Primary, secondary and tertiary circulation. We will also look at some of the types of primary, secondary and tertiary circulation.
- Understanding how temperature affects air pressure and how these factors causes movement of air then your understanding of Climate and weather is made much easier

X-PLANATION

GENERAL INTRODUCTION TO CLIMATE AND WEATHER:

In the three presentations of climate and weather there are many overlaps regarding the different sections e.g. we will make reference to mountain and valley breezes in tertiary circulation and microclimatology. Learning these sections in this manner is very important as the answer to questions could incorporate three or more different sections

PRIMARY, SECONDARY AND TERTIARY CIRCULATION:

Primary circulation is the major way in which heat energy is transferred to different parts of the earth's surface on a global scale. It includes both horizontal and vertical movements e.g. the tri-cellular arrangement.

Secondary circulations are circulations that occur within primary circulations. They occur on a smaller scale, covering smaller areas and lasting from a few days to a few weeks e.g. monsoons and cyclones.

Tertiary circulations are more localised circulations than secondary circulations and sometimes could last for only a few hours e.g. land and sea breezes and berg winds.
