[Geospatial Techniques for Managing Environmental Resources](#) Jay Krishna Thakur, Sudhir Kumar Singh, AL Ramanathan, M. Bala Krishna Prasad, Wolfgang Gossel, 2012-03-05

Geospatial Information is spatial data concerning a place or in space collected in real time. Geospatial techniques, together with remote sensing, geographic information science, Global Positioning System (GPS), cartography, geovisualization, and spatial statistics, are being used to capture, store, manipulate, and analyze data to understand complex situations and solve mysteries of the universe. These techniques have been applied in various fields such as meteorology, forestry, environmental management, agriculture, health, homeland security, etc. around the globe. This volume presents case studies and examples from various parts of the world and provides a broad overview of various approaches, data sets, data acquiring, monitoring, and dissemination methods, satellites, and sensors, tools, and techniques used, integrating tools, techniques, and application to various fields for the sustainable management of environmental resources in the context of global environmental change and natural hazards. The objective of this book is to provide state-of-the-art information to academics, researchers, and industry practitioners who are involved or interested in the study, use, design, and development of advanced and emerging geospatial technologies around the world with ultimate aim to empower individuals and organizations in building competencies for exploiting the opportunities of the knowledge society. All the chapters are peer-reviewed and evaluated and are an inter- and multi-disciplinary source of information making an effort to link various geospatial techniques to make the earth an habitable place. The contributors have tried to focus their respective views on the current problems that need urgent attention.
