Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world s leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change

Education in a Digital World Neil Selwyn, 2013. Drawing on a wealth of theoretical and empirical work, *Education in a Digital World* tackles a number of pressing questions such as: how are global trends in educational technology refracted through national policies and processes? How exactly are educational technologies linked to issues of global economics and the fortunes of national and international economies? To what extent are digital technologies implicated in the commercialisation, marketization and commodification of education? These questions and others are addressed throughout eight wide-ranging chapters which consider topics such as the national policy strategies of countries across North and South America, Europe and East Asia; the educational technology portfolios of international organizations such as the United Nations and Microsoft; as well as the role of education and technology in international development and the on-going efforts to provide one laptop per child across low-income regions and countries. Through these examples, Selwyn develops a detailed analysis of education technology and globalisation, drawing together arguments and debates from various academic perspectives. Written in a detailed but accessible manner, this is an essential book for anyone wishing to gain a better understanding of the role of education and technology in contemporary globalised society.

**Global Perspectives on Changing Secondhand Economies** Karen Tranberg Hansen, Jennifer Le Zotte, 2022-02-23. Providing interdisciplinary and global perspectives, this book examines historical and contemporary changes in secondhand economies, including the emergence and specialization of secondhand venues, the materials involved, as well as the cultural significance of secondhand things and the professions associated with them. The objects in focus range from used clothing, scrap and waste materials to antiquities and used cars, thrift stores and circular economies. Growing concerns with sustainability in the West have helped bring about the rediscovery of practices of clothing re-use, re-purposing and re-cycling at the same time as major high street retailers are establishing programs to return used clothing to their stores for re-sale or recycling. As the contributions to this edited volume demonstrate, recent concerns with the fast pace and adverse effects of global commodity flows have increased the scholarly attention to secondhand economies both in terms of their history and their significance for livelihoods and sustainability. The chapters in this book were originally published as a special issue of the journal *Business History*.
