# STATES OF MATTER

## Complete Matter Unit

### What is Matter?

#### Definition:

- Matter: anything that has weight and takes up space.
- Solids: The solid state of matter.

#### What is matter?

Matter is what makes up everything around us. It is anything that has weight and takes up space. Matter can't be created or destroyed. Everything that we see is made up of matter. Even things you can't see like the air we breathe are made up of matter.

#### What makes up matter?

All matter is made up of atoms and molecules. Atoms and molecules are also called particles. An atom is the smallest part of matter. It is the building block that makes up all of the things around us. Matter can only be created or destroyed if it is broken down into its smallest parts. Atoms and molecules are made up of smaller particles called protons, neutrons and electrons.

Molecules are made up of two or more atoms that are joined together. They are larger than atoms and can be seen with a microscope. Atoms and molecules are made up of smaller particles called protons, neutrons and electrons. These particles are called 'quarks'.

Imagine building a house of blocks. The individual blocks are like the particles that make up matter. If you put them all together, you have the house. Matter is the house.
