Achieving Further Daniel Slosberg, 2016-01-07 Do you have students who are far ahead of their peers in math? Are you a teacher who differentiates for those students by giving them additional topics but without knowing what topics they have already covered over the past years and without a plan for the topics they should cover in the next years? Are you a head of department who wants to streamline differentiation throughout your math department to ensure talented students have a more uniform experience as they move from teacher to teacher and have a goal they are working towards year after year? Are you a principal who wants to improve the results of your students in HL Math and to have students from your school start succeeding in HL Further Math? If so, this book describes a program to prepare IB Middle Years Program (MYP) students to enter the Diploma Program (DP) taking HL Further Math as their only math course. The program is modeled on the ATYP program from Kalamazoo, MI, started by Carol McCarthy.

Advanced EEG Analysis Techniques for Neurological Disorders Jisu Elsa Jacob, A. Amalin Prince, Omar Farooq, Saadullah Farooq Abbasi, 2025-08-26 Electroencephalography (EEG) is a versatile tool that has significantly impacted the understanding and treatment of various neurological disorders. Due to its non-invasive nature and high temporal resolution, it allows the monitoring of brain activity in both real time and across extended periods. Recent advancements in EEG technology, coupled with sophisticated computational algorithms, have provided unprecedented insights into the brain's functioning. However, the full potential of EEG analysis in detecting, diagnosing, and treating neurological disorders remains underexplored. The primary goal of this Research Topic is to highlight and address recent developments in EEG analysis techniques for neurological disorders. While traditional methods have been pivotal in understanding neurological disorders, leading researchers are innovating advanced EEG analysis techniques.

leveraging artificial intelligence machine learning and deep learning These technologies are revolutionizing our ability to understand and treat disorders including epilepsy Alzheimer s disease depression encephalopathy and others This Research Topic aims to gather researchers working on advanced EEG analysis techniques to share their knowledge methodologies and applications in a comprehensive manner The ultimate aim is to expedite the evolution of EEG based diagnosis and treatment strategies augmenting the fight against neurological disorders effectively

Health literacy and disease prevention, volume II Sudip Bhattacharya,Ozden Gokdemir,Deep Shikha,Ferdinando Petrazzuoli,Poonam Kushwaha,2024-03-06 This Research Topic is a follow on from the Topic Editors successful volume I The term health literacy was coined by Ratzan et al in the 1970s providing the minimal health education required in schools however this term is almost new and in the early phase of development Though many attempts have been made in the past to define health literacy WHO construed it as the cognitive and social skills which determine the motivation and ability of individuals to gain access to understand and use information in ways which promote and maintain good health Health literacy not only focuses on the individual behavior oriented communication but also on the various determinants of health such as environmental social and political factors thus it is ahead in the concept of health education If health education methods go beyond the bounds of information diffusion and bring about interaction participation and critical analysis such kind of approach will lead to improved health literacy personal aid and social benefit by enabling adequate community action and contributions to the advancement of social capital

Cyclostationarity: Theory and Methods Fakher Chaari,Jacek Leśkow,Antonio Napolitano,Andrea Sanchez-Ramirez,2014-01-16 In the last decade the research in signal analysis was dominated by models that encompass nonstationarity as an important feature This book presents the results of a workshop held in Grodek Poland in February 2013 which was dedicated to the investigation of cyclostationary signals Its main objective is to highlight the strong interactions between theory and applications of cyclostationary signals with the use of modern statistical tools An important application of cyclostationary signals is the analysis of mechanical signals generated by a vibrating mechanism Cyclostationary models are very important to perform basic operations on signals in both time and frequency domains One of the fundamental problems in diagnosis of rotating machine is the identification of significant modulating frequencies that contribute to the cyclostationary nature of the signals The book shows that there are modern tools available for analyzing cyclostationary signals without the assumption of gaussianity Those methods are based on the ideas of bootstrap subsampling and Fraction of time FOT models The book is organised in two parts The first part will be dedicated to pure theory on cyclostationarity Applications are presented in the second part including several mechanical systems such as bearings gears with or without damages
