

# BASS INFORMATION

## BRIDGES

### ATK

ATK bridges were designed to allow the maximum amount of string vibration to transfer from the body. For slightly more sustain, strings can be installed either from the back of the instrument through the string grooves. For slightly more attack, the strings can be lowered into the bridge from the front of the instrument and hooked onto the string catch. Intonation adjustments can be made by adjusting the intonation screws (A) at the rear of the bridge clockwise to move the saddle back, and counter clockwise to move the saddle forward.

\*Note: When replacing string check with the dealer to make sure the new strings are long enough for the full scale length of the bass.

### MONO-RAIL II

Mono-Rail II bridges allow the bass strings to be isolated from one another by using independent bridge plates for each string. The strings are installed by lowering the ball end into the bridge and hooking the ball end below the string catch at the rear of the bridge.

Intonation adjustments can be made by adjusting the intonation screws (A) at the rear of the bridge clockwise to move the saddle back, and counter clockwise to move the saddle forward.

## ACTIVE EQ.

### VARI-MID EQ

### BTB SERIES - VARI-MID 3B

The Vari-Mid 3B EQ was designed to work with passive pickups and is loaded with 18 volts to allow the user to get more output from the bass before distortion.

### ATK : 3 BAND EQ

The Ibanez ATK 3 BAND EQ was designed for use with passive pickups and allows the user to control the bass/treble and mid range boost and cut.

## BASS CONTROLS

## PICKUP SELECTION

### ATK : 5 WAY PICKUP CHARACTER SWITCH

The 5 way pickup character switch allows the user five completely different tone positions.

— — — — — None cancel out

### ALL 2 PICKUP MODELS : PICKUP BALANCER

The pickup balance control pot allows the user to level between the front and back pickups using a single pot. The center position of the pot has a dot which will set both pickups to equal output. Turning the knob clockwise increases the neck pickup while decreasing the output of the bridge pickup. Turning the knob counter clockwise decreases the neck pickup and increases the output of the bridge pickup.
