Image Processing Systems in Business Robert J. Thierauf,1992-05-20 A common complaint heard in today s business office is There is paper everywhere but I cannot find the document that I m looking for It is estimated that 90 percent of all data and information currently being processed and distributed within offices and between organizations resides on paper Finding the physical space to store this paper can be a key problem To overcome this problem and others there is a need for a dramatic new approach to information processing found in business Such an approach is found in this unique and useful volume Essentially image processing systems in business use today s computer technology to solve paper processing and storage problems Their main means of processing is performed electronically that is documents are captured initially on an electronic medium and forwarded to other users in the same mode In this manner their essential means of communicating with users is in an electronic format versus a paper one Also image processing systems in business are much more flexible in meeting changing user needs especially when the data is stored on optical disk **ABA Banking Journal** American Bankers Association,1995 **Bank Management** ,1992 *Data Sources* ,2000 Payment Systems Richard E.
