Along with its companion volume *Database Dreaming Volume II* this book offers a collection of essays on the general topic of relational databases and relational database technology. Most of those essays though not all have been published before but only in journals and magazines that are now hard to find or in books that are now out of print. Here's a lightly edited excerpt from the preface so this is the author speaking: I went back and reviewed all of those early essays looking for ones that seemed worth reviving or rather revising and reviving at this time. Of course some of them definitely weren't. However out of a total of around 130 original papers I did find some 20 or so that seemed to me worth preserving and hadn't already been incorporated in or superseded by more recent books of mine. So I tracked down the original versions of those 20 or so papers and set to work. When I was done though I found I had somewhere in excess of 600 pages on my hands too much in my view for just one book and so I split them across two separate volumes. Highlights of the present volume include a discussion of the difficulties involved in providing a relational interface to a nonrelational system, a tutorial on the quantifiers and what happens to them under three valued logic, an examination of the effect of user defined types on optimization, some thoughts on normalization and database design tools and caveats regarding certain important database operators especially outer join and negation. *Readings in Artificial Intelligence and Databases* John Mylopoulos, Michael L. Brodie, 2014-06-28. The interaction of database and AI technologies is crucial to such applications as data mining, active databases and knowledge based expert systems. This volume collects the primary readings on the interactions actual and potential between these two fields. The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s. An in depth introduction discusses basic research motivations giving a survey of the history, concepts and terminology of the interaction. Major themes, approaches and results, open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs. Thirteen sections follow each with a short introduction. Topics examined include semantic data models with emphasis on conceptual
