

Lab 1: Adding a Rhapsody Model to RMM

Objectives

After completing this lab, you will be able to:

- ▶ Create an RTC repository workspace and local sandbox
- ▶ Add a Rhapsody model to RMM
- ▶ Link a work item to a change set and deliver the change set to a stream

Scenario

In this Lab, you will setup the Rational Team Concert client to connect to the RMM repository on the Jazz Team Server as one of the sample users - Dan. You will create a repository workspace and a local sandbox for Dan. You will then take an existing Rhapsody model and move it into the local sandbox and enable it to be managed by RMM. You will see how Rhapsody automatically creates change sets in RTC. You will see how to configure RTC to ignore any changed files that do not need to be shared with the team (such as the event history list and rhapsody workspace files). You will associate a change set (in this case the initial delivery of the model) with a new work item and check those changes into Dan's repository workspace (in later labs you will start with a work item and then implement those changes which is the more usual way of working). Lastly you will deliver the change set to the shared stream so the model is accessible to other team members.

Note that the RTC folders for dan and pete already exist but are essentially empty. However, some preferences have been set in these workspaces – if you create your own workspace then the behavior may differ. For example, in these two workspaces – the option to auto-refresh the sandbox has been set (if this option is not set then you would need to manually refresh the sandbox using the **Window → Preferences** menu in the RTC Eclipse client)
