

Introduction to Ecology and the Biosphere

Ecology

- Ecology is the study of interactions between living organisms and their environment
 - Need to understand the **distribution** and **abundance** of living organisms
- Ecology is divided into four levels:
 - **Organismal**
 - Individual organisms
 - **Population**
 - Members of the same species living in the same area at the same time
 - **Community**
 - All species living in the same area at the same time
 - **Ecosystems**
 - Includes all biotic and abiotic components of an area

Ecological levels

- Individual organism → population → community → ecosystem

Individual zebra

Many individuals of the same species living in the same place is called a population

A community together with the abiotic (non-living) environment is called an ecosystem

Many different populations living in the same place is called a community

Four Levels of Ecological study

- Organismal Ecology

Trudgill, 2014-09-25 Terrestrial Biosphere tries to pose the questions which underlie the many sided debate of how to respond to and influence change How should we view nature What do we do for the best how should we act what are we trying to achieve and what should we be guided by In doing so the book introduces and attempts to analyse not only scientific aspects of the debate but also cultural attitudes and values the notions of ecosystem stability are now challenged and it is also clear that ecosystems are renewable but not repeatable It finds that prescriptive solutions based on current constructs may not be adequate Feeling that analysis should lead to advocacy the author believes that if we can't improve predictability we have to increase adaptability which means that ecological and social capacity building should be advocated This is seen in terms of concepts institutions attitudes and values which allow for a plurality of meanings and which can cope with surprise and unforeseen change and which also facilitates responses to change *Zoology for Degree Students (For B.Sc.
