Human Body System Interaction Review

Why? There are many organ systems in the body, each with a specific function. However, they do not work alone. The organ systems in the human body interact to perform the necessary functions for life. Through interactions, the body systems maintain internal balance or equilibrium known as homeostasis.

Model 1: Respiratory and Circulatory

The **respiratory system** is responsible for gas exchange. It includes the lungs (O₂ goes into the body and CO₂ leaves the body) and the **circulatory system**, however, does not work alone. It relies on the **circulatory system** to transport the gases around the body. This exchange of gas is not from the blood stream of the circulatory system, takes place in the alveoli, tiny air sacs in the lung. This exchange maintains the correct concentrations of gases within the blood to maintain homeostasis: respiration.

Use the reading and write down as best as you can knowledge of human body systems to answer the following questions.

1. Where are the alveoli located? _____
2. What takes place in the alveoli? _____
3. What 2 body systems are interacting in the diagram? _____

4. How are the 2 body systems you mentioned above interacting to maintain homeostasis? _____

Model 2: Digestive and Circulatory

The **digestive system** breaks down food into essential nutrients for the body to use. But how do these nutrients get to the cells? After food is broken down by chemical and mechanical digestion in the mouth, stomach and small intestine, absorption takes place. Nutrients are absorbed (taken up) from the small intestine into the blood stream of the circulatory system. The circulatory system transports the nutrients around the body for

Use the reading and write down as best as you can knowledge of human body systems to answer the following questions.

1. What are the major organs of the digestive system? _____
2. How do the organs contribute to the digestive process? _____
3. What two body systems interact in this model? _____

Human Body Systems Daniel D. Chiras, 2003 *Introductory Human Biology* , *Microcontrollers and Microcomputers* Fredrick M. Cady, 2010 This book takes a unique processor agnostic approach to teaching the core course on microcontrollers or embedded systems taught at most schools of electrical and computer engineering Most books for this course teach students using only one specific microcontroller in the class Cady however studies the common ground between microcontrollers in one volume As there is no other book available to serve this purpose in the classroom readership is broadened to anyone who accepts its pedagogical value not simply those courses that use the same microcontroller

Because the text is purposefully processor non specific it can be used with processor specific material such as manufacturer s data sheets and reference manuals or with texts such as Software and Hardware Engineering Motorola M68HC11 or Software and Hardware Engineering Motorola M68HC12 The fundamental operation of standard microcontroller features such as parallel and serial I O interfaces interrupts analog to digital conversion and timers is covered with attention paid to the electrical interfaces needed
