fundamental preparation for more advanced courses in linear and nonlinear optimization and many stochastic models and analyses It provides relevant analytical tools for this varied audience and will also serve professionals corporate managers and technical consultants     Managing Art Peter Bendixen,2010 Arts Management is anything but a mere amalgamation of the world of the arts and the world of business management it is the confrontation of two opposing methodologies one being a field of human creativity that produces something new that did not exist before the other one diving into the existing world of business practices in order to improve their efficiency Some references to cultural philosophy economic and arts history and other important subjects are indispensable or at least helpful in understanding the chances and risks of arts management practices This is the aim of this book which is based on more than twenty years of teaching researching and consulting in the field of cultural administration and arts management     **The Cult of Pythagoras** Alberto A.

Martinez,2012-10-30 In this follow up to his popular Science Secrets Alberto A Martinez discusses various popular myths from the history of mathematics that Pythagoras proved the hypotenuse theorem that Archimedes figured out how to test the purity of a gold crown while he was in a bathtub that the Golden Ratio is in nature and ancient architecture that the young Galois created group theory the night before the pistol duel that killed him and more Some stories are partly true others are entirely false but all show the power of invention in history Pythagoras emerges as a symbol of the urge to conjecture and fill in the gaps of history He has been credited with fundamental discoveries in mathematics and the sciences yet there is nearly no evidence that he really contributed anything to such fields at all This book asks how does history change when we subtract the many small exaggerations and interpolations that writers have added for over two thousand years The Cult of Pythagoras is also about invention in a positive sense Most people view mathematical breakthroughs as discoveries rather than invention or creativity believing that mathematics describes a realm of eternal ideas But mathematicians have disagreed about what is possible and impossible about what counts as a proof and even about the results of certain operations Was there ever invention in the history of concepts such as zero negative numbers imaginary numbers quaternions infinity and infinitesimals Martinez inspects a wealth of primary sources in several languages over a span of many centuries By exploring disagreements and ambiguities in the history of the elements of mathematics The Cult of Pythagoras dispels myths that obscure the actual origins of mathematical concepts Martinez argues that an accurate history that analyzes myths reveals neglected aspects of mathematics that can encourage creativity in students and mathematicians     *Business Strategy and Sustainability* Guler Aras,David Crowther,2012-04-27 There are many aspects of sustainability which might be considered to reflect Brundtland's three pillars of economic environmental and social sustainability Others of course have different definitions which include such things as governance or supply chain management This title addresses this debate

**Strategic allocation of resources using linear programming model with parametric analysis: in MATLAB and Excel Solver** Dinesh Gupta,2014-05-01 Since the late 1940s linear programming models have been used for many different

purposes Airline companies apply these models to optimize their use of planes and staff NASA has been using them for years to optimize their use of limited resources Oil companies use them to optimize their refinery operations Small and medium sized businesses use linear programming to solve a huge variety of problems often involving resource allocation In my study a typical product mix problem in a manufacturing system producing two products each product consists of two sub assemblies is solved for its optimal solution through the use of the latest versions of MATLAB having the command `simlp` which is very much like `linprog` As analysts we try to find a good enough solution for the decision maker to make a final decision Our attempt is to give the mathematical description of the product mix optimization problem and bring the problem into a form ready to call MATLAB's `simlp` command The objective of this study is to find the best product mix that maximizes profit The graph obtained using MATLAB commands give the shaded area enclosed by the constraints called the feasible region which is the set of points satisfying all the constraints To find the optimal solution we look at the lines of equal profit to find the corner of the feasible region which yield the highest profit This corner can be found out at the farthest line of equal profit which still touches the feasible region The most critical part is the sensitivity analysis using Excel Solver and Parametric Analysis using computer software which allows us to study the effect on optimal solution due to discrete and continuous change in parameters of the LP model including to identify bottlenecks We have examined other options like product outsourcing one time cost cross training of one operator manufacturing of hypothetical third product on under utilized machines and optimal sequencing of jobs on machines
