Shape Optimization Problems Hideyuki Azegami, 2020-09-30 This book provides theories on non parametric shape optimization problems systematically keeping in mind readers with an engineering background Non parametric shape optimization problems are defined as problems of finding the shapes of domains in which boundary value problems of partial differential equations are defined In these problems optimum shapes are obtained from an arbitrary form without any geometrical parameters previously assigned In particular problems in which the optimum shape is sought by making a hole in domain are called topology optimization problems Moreover a problem in which the optimum shape is obtained based on domain variation is referred to as a shape optimization problem of domain variation type or a shape optimization problem in a limited sense Software has been developed to solve these problems and it is being used to seek practical optimum shapes However there are no books explaining such theories beginning with their foundations The structure of the book is shown in the Preface The theorems are built up using mathematical results Therefore a mathematical style is introduced consisting of definitions and theorems to summarize the key points This method of expression is advanced as provable facts are clearly shown If something to be investigated is contained in the framework of mathematics setting up a theory using theorems prepared by great mathematicians is thought to be an extremely effective approach However mathematics attempts to heighten the level of abstraction in order to understand many things in a unified fashion This characteristic may baffle readers with an engineering background Hence in this book an attempt has been made to provide explanations in engineering terms with examples from mechanics after accurately denoting the provable facts using definitions and theorems

Optimization with PDE Constraints Ronald Hoppe, 2014-09-11 This book on PDE Constrained Optimization contains contributions on the mathematical analysis and numerical solution of constrained optimal control and optimization problems where a partial differential equation PDE or a system of PDEs appears as an essential part of the constraints The appropriate treatment of such problems requires a fundamental understanding of the subtle interplay between optimization in function spaces and numerical discretization techniques and relies on advanced methodologies from the theory of PDEs and numerical analysis as well as scientific computing The contributions reflect the work of the European Science Foundation Networking Programme Optimization with PDEs OPTPDE *Primer on Optimal Control Theory* Jason L. Speyer, David H.
