

transition from a fossil fuel-based to renewable and sustainable power system. However, when power production is based upon lignite, the time to replace coal by other resources comes at the expense of the time to begin work on the development of sustainable power resources. The electricity generated from the production of power from such sources is traditional energy that has been the dominant electricity source for the entire of a nation's power supply for decades. It is possible that the power system organization could be set up to promote a transition to other low-carbon sources of electricity and that such a transition is being set in motion for electricity and for water resources.
