Other Circulatory and Respiratory Systems

You have a closed circulatory system. A system of vessels and organs holds your blood, and it stays in there. One of the organs is a muscular heart, which pumps the blood around and around through the system. All vertebrate animals have a similar circulatory system. These animals include mammals, birds, reptiles, fish, and amphibians.

Invertebrate animals have different kinds of systems for distributing food and other nutrients to their cells. The painted lady butterfly is a member of the class of invertebrates called insects. Insects have an open circulatory system. One vessel runs from their head to the end of their abdomen. In the abdomen, the vessel forms several chambers called hearts. When the insect moves, its muscles make the hearts push the blood toward the head. The blood spills out into the body cavity. There it soaks freely around the organs and other tissues.
