*The Education Invasion* Joy Pullmann,2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How

did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies

**Smog in our brains: Gender differences in the impact of exposure to air pollution on cognitive performance in China** Chen, Xi, Zhang, Xiaobo, Zhang, Xin, 2017-03-11 While there is a large body of literature on the negative health effects of air pollution there is much less written about its effects on cognitive performance for the whole population This paper studies the effects of contemporaneous and cumulative exposure to air pollution on cognitive performance based on a nationally representative survey in China By merging a longitudinal sample at the individual level with local air quality data according to the exact dates and counties of interviews we find that contemporaneous and cumulative exposure to air pollution impedes both verbal and math scores of survey subjects Interestingly the negative effect is stronger for men than for women Specifically the gender difference is more salient among the old and less educated in both verbal and math tests
