MARK SCHEME for the October/November 2013 series

0580 MATHEMATICS

0580/42

Paper 4 (Extended), maximum raw mark 130

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies

Quantum mechanics is an extraordinarily successful scientific theory It is also completely mad Although the theory quite obviously works it leaves us chasing ghosts and phantoms particles that are waves and waves that are particles cats that are at once both alive and dead and lots of seemingly spooky goings on But if we re prepared to be a little more specific about what we mean when we talk about reality and a little more circumspect in the way we think a scientific theory might represent such a reality then all the mystery goes away This shows that the choice we face is actually a philosophical one Here Jim Baggott provides a quick but comprehensive introduction to quantum mechanics for the general reader and explains what makes this theory so very different from the rest He also explores the processes involved in developing scientific theories and explains how these lead to different philosophical positions essential if we are to understand the nature of the great debate between Niels Bohr and Albert Einstein Moving forwards Baggott then provides a comprehensive guide to attempts to determine what the theory actually means from the Copenhagen interpretation to many worlds and the multiverse Richard Feynman once declared that nobody understands quantum mechanics This book will tell you why

Nonsmooth Optimization and Its Applications Seyedehsomayeh Hosseini,Boris S. Mordukhovich,André Uschmajew,2019-03-29 Since nonsmooth optimization problems arise in a diverse range of real world applications the potential impact of efficient methods for solving such problems is undeniable Even solving difficult smooth problems sometimes requires the use of nonsmooth optimization methods in order to either reduce the problem s scale or simplify its structure Accordingly the field of nonsmooth optimization is an important area of mathematical programming that is based on by now classical concepts of variational analysis and generalized derivatives and has developed a rich and sophisticated set of mathematical tools at the intersection of theory and practice This volume of ISNM is an outcome of the workshop

Nonsmooth Optimization and its Applications which was held from May 15 to 19 2017 at the Hausdorff Center for Mathematics University of Bonn The six research articles gathered here focus on recent results that highlight different aspects of nonsmooth and variational analysis optimization methods their convergence theory and applications **Fractals, Wavelets, and their Applications** Christoph Bandt, Michael Barnsley, Robert Devaney, Kenneth J. Falconer, V. Kannan, Vinod Kumar P.B., 2014-09-27 Fractals and wavelets are emerging areas of mathematics with many common factors which can be used to develop new technologies This volume contains the selected contributions from the lectures and plenary and invited talks given at the International Workshop and Conference on Fractals and Wavelets held at Rajagiri School of Engineering and Technology India from November 9 12 2013 Written by experts the contributions hope to inspire and motivate researchers working in this area They provide more insight into the areas of fractals self similarity iterated function systems wavelets and the applications of both fractals and wavelets This volume will be useful for the beginners as well as experts in the fields of fractals and wavelets **Information Hiding in Communication Networks** Wojciech Mazurczyk, Steffen Wendzel, Sebastian Zander, Amir Houmansadr, Krzysztof Szczypiorski, 2016-02-10 Describes Information Hiding in communication networks and highlights their important issues challenges trends and applications Highlights development trends and potential future directions of Information Hiding Introduces a new classification and taxonomy for modern data hiding techniques Presents different types of network steganography mechanisms Introduces several example applications of information hiding in communication networks including some recent covert communication techniques in popular Internet services *The State of the System* Paul W. Bennett, 2020-09-23 Over the last fifty years Canada's public schools have been absorbed into a modern education system that functions much like Max Weber's infamous iron cage Crying out for democratic school level reform the system is now a centralized bureaucratic fortress that every year becomes softer on standards for students less accessible to parents further out of touch with communities and surprisingly unresponsive to classroom teachers Exploring the nature of the Canadian education order in all its dimensions The State of the System explains how public schools came to be so bureaucratic confronts the critical issues facing kindergarten to grade 12 public schools in all ten provinces and addresses the need for systemic reform Going beyond a diagnosis of the stresses strains and ills present in the system Paul Bennett proposes a bold plan to re-engineer schools on a more human scale as the first step in truly reforming public education In place of school consolidation and managerialism one size fits all uniformity limited school choice and the success for all curriculum Bennett advocates for a new set of priorities decentralize school governance deprogram education ministries and school districts listen to parents and teachers and revitalize local education democracy Tackling the thorny issues besetting contemporary school systems in Canada The State of the System issues a clarion call for more responsive engaged and accountable public schools **Advanced Energy Efficiency Technologies for Solar Heating, Cooling and Power Generation** Xudong Zhao, Xiaoli Ma, 2019-07-08 This book based on the research experience

and outcomes of a group of international contributors addresses a range of advanced energy efficiency technologies and their applications in solar heating cooling and power generation while also providing solutions for tackling recurring low efficiency problems in today's systems. It highlights the latest technologies and methods which can significantly improve the performance of solar systems enabling readers to design construct and apply high performance solar systems in or for their own projects. The contributors provide a systematic introduction to state of the art energy efficiency technologies that demonstrates how to implement innovative solar systems. These technologies include heat pipes and loop heat pipes phase change materials PCMs and PCM slurries micro channel panels desiccant adsorption cycling ejector cooling and heat pumps and solar concentration and thermoelectric units. The book shows how innovative solar systems applicable to rural and urban buildings can be analysed and demonstrates the successful implementation of these advanced technologies. It delivers the design principles and associated energy performance assessment methods for a range of selected solar heating cooling and power generation projects. This book offers a valuable source of information for final year undergraduate students as well as graduate students and academic lecturers as it promotes the widespread deployment of advanced solar heating cooling and power generation technologies applicable for buildings across the globe. The book is also a good point of reference for design engineers and energy consultants who wish to extend their knowledge of advanced technologies used to achieve energy efficiency.

Reinventing America's Schools David Osborne, 2017-09-05 From David Osborne the author of *Reinventing Government* a biting analysis of the failure of America's public schools and a comprehensive plan for revitalizing American education. In *Reinventing America's Schools* David Osborne one of the world's foremost experts on public sector reform offers a comprehensive analysis of the charter school movements and presents a theory that will do for American schools what his *New York Times* bestseller *Reinventing Government* did for public governance in 1992. In 2005 when Hurricane Katrina devastated New Orleans the city got an unexpected opportunity to recreate their school system from scratch. The state's Recovery School District RSD created to turn around failing schools gradually transformed all of its New Orleans schools into charter schools and the results are shaking the very foundations of American education. Test scores school performance scores graduation and dropout rates ACT scores college going rates and independent studies all tell the same story: the city's RSD schools have tripled their effectiveness in eight years. Now other cities are following suit with state governments reinventing failing schools in Newark Camden Memphis Denver Indianapolis Cleveland and Oakland. In this book Osborne uses compelling stories from cities like New Orleans and lays out the history and possible future of public education. Ultimately he uses his extensive research to argue that in today's world we should treat every public school like a charter school and grant them autonomy accountability diversity of school designs and parental choice.

Multivariate, Multilinear and Mixed Linear Models Katarzyna Filipiak, Augustyn Markiewicz, Dietrich von Rosen, 2021-10-01 This book presents the latest findings on statistical inference in multivariate multilinear and mixed linear models providing a holistic

presentation of the subject It contains pioneering and carefully selected review contributions by experts in the field and guides the reader through topics related to estimation and testing of multivariate and mixed linear model parameters Starting with the theory of multivariate distributions covering identification and testing of covariance structures and means under various multivariate models it goes on to discuss estimation in mixed linear models and their transformations The results presented originate from the work of the research group Multivariate and Mixed Linear Models and their meetings held at the Mathematical Research and Conference Center in B dlewo Poland over the last 10 years Featuring an extensive bibliography of related publications the book is intended for PhD students and researchers in modern statistical science who are interested in multivariate and mixed linear models [The Math Myth](#) Andrew Hacker,2010-05-25 A New York Times

bestselling author looks at mathematics education in America when it s worthwhile and when it s not Why do we inflict a full menu of mathematics algebra geometry trigonometry even calculus on all young Americans regardless of their interests or aptitudes While Andrew Hacker has been a professor of mathematics himself and extols the glories of the subject he also questions some widely held assumptions in this thought provoking and practical minded book Does advanced math really broaden our minds Is mastery of azimuths and asymptotes needed for success in most jobs Should the entire Common Core syllabus be required of every student Hacker worries that our nation s current frenzied emphasis on STEM is diverting attention from other pursuits and even subverting the spirit of the country Here he shows how mandating math for everyone prevents other talents from being developed and acts as an irrational barrier to graduation and careers He proposes alternatives including teaching facility with figures quantitative reasoning and understanding statistics Expanding upon the author s viral New York Times op ed [The Math Myth](#) is sure to spark a heated and needed national conversation not just about mathematics but about the kind of people and society we want to be Hacker s accessible arguments offer plenty to think about and should serve as a clarion call to students parents and educators who decry the one size fits all approach to schooling Publishers Weekly starred review **Graph-Theoretic Concepts in Computer Science** Michael A.

important public policy questions The articles in this volume are papers inspired by a Workshop for Women in Mathematics and Public Policy held January 22-25, 2019 at the Institute for Pure and Applied Mathematics and the Luskin Center at the University of California Los Angeles The workshop was created to promote and develop women at all levels of their careers as researchers in mathematics and public policy The idea was modeled after other successful Research Collaboration Conferences for Women where junior and senior women come together at week long conferences held at mathematics institutes to work on pre defined research projects The workshop focused on how mathematics can be used in public policy research and was designed to foster collaborative networks for women to help address the gender gap in mathematics and science
