Mathematical Studies on Human Disease Dynamics Abba B. Gumel, Carlos Castillo-Chávez, Ronald E.

Mickens, Dominic P. Clemence, 2006 This volume contains the proceedings of the AMS SIAM IMS Joint Summer Research Conference on Modeling the Dynamics of Human Diseases Emerging Paradigms and Challenges held in Snowbird Utah July 17-21, 2005. The goal of the conference was to bring together leading and upcoming researchers to discuss the latest advances and challenges associated with the modeling of the dynamics of emerging and re-emerging diseases and to explore various control strategies. The articles included in this book are devoted to some of the significant recent advances, trends, and challenges associated with the mathematical modeling and analysis of the dynamics and control of some diseases of public health importance. In addition to illustrating many of the diverse prevailing epidemiological challenges together with the diversity of mathematical approaches needed to address them, this book provides insights on a number of topical modeling issues such as the modeling and control of mosquito-borne diseases, respiratory diseases, animal diseases such as foot and mouth disease, cancer, and tumor growth modeling, influenza, HIV, HPV, rotavirus, etc. This book also touches upon other important topics such as the use of modeling in

Developing a 21st Century Global Library for Mathematics Research National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Planning a Global Library of the Mathematical Sciences, 2014-03-25. Like most areas of scholarship, mathematics is a cumulative discipline; new research is reliant on well-organized and well-curated literature. Because of the precise definitions and structures within mathematics, today's information technologies and machine learning tools provide an opportunity to further organize and enhance the discoverability of the mathematics literature in new ways, with the potential to significantly facilitate mathematics research and learning. Opportunities exist to enhance discoverability directly via new technologies and also by using technology to capture important interactions between mathematicians and the literature for later sharing and reuse. *Developing a 21st Century Global Library for Mathematics Research* discusses how information about what the mathematical literature contains can be formalized and made easier to express, encode, and explore. Many of the tools necessary to make this information system a reality will require much more than indexing and will instead depend on community input paired with machine learning, where mathematicians' expertise can fill the gaps of automatization. This report proposes the establishment of an organization, the development of a set of platforms, tools, and services, the deployment of an ongoing applied research program to complement the development work, and the mobilization and coordination of the mathematical community to take the first steps toward these capabilities. The report recommends building on the extensive work done by many dedicated individuals under the rubric of the World Digital Mathematical Library, as well as many other community initiatives. *Developing a 21st Century Global Library for Mathematics* envisions a combination of machine learning methods and community-based editorial effort that makes a significantly greater portion of

the information and knowledge in the global mathematical corpus available to researchers as linked open data through a central organizational entity referred to in the report as the Digital Mathematics Library This report describes how such a library might operate discussing development and research needs role in facilitating discover and interaction and establishing partnerships with publishers The Best Writing on Mathematics 2021 Mircea Pitici, 2022-07-19 The year s finest mathematical writing from around the world This annual anthology brings together the year s finest mathematics writing from around the world and you don t need to be a mathematician to enjoy the pieces collected here These essays from leading names and fresh new voices delve into the history philosophy teaching and everyday aspects of math offering surprising insights into its nature meaning and practice and taking readers behind the scenes of today s hottest mathematical debates Here Viktor Bl sj gives a brief history of lockdown mathematics Yelda Nasifoglu decodes the politics of a seventeenth century play in which the characters are geometric shapes and Andrew Lewis Pye explains the basic algorithmic rules and computational procedures behind cryptocurrencies In other essays Terence Tao candidly recalls the adventures and misadventures of growing up to become a leading mathematician Natalie Wolchover shows how old math gives new clues about whether time really flows and David Hand discusses the problem of dark data information that is missing or ignored And there is much much more **Performance-Based Assessment for 21st-Century Skills** Todd Stanley, 2021-09-03

Performance based assessments allow classroom teachers an alternative to traditional multiple choice tests We often use fill in the bubble assessments in education to determine the readiness of students However in the 21st century workplace these types of tests fail to truly prepare students How many times in the real world are we called upon to take a multiple choice test In the real world we are called upon to prove our merit through performance based assessments displaying our 21st century skills We should be preparing students for this in the classroom Performance Based Assessment for 21st Century Skills makes the argument that teachers should use performance based assessments in the classroom It guides the educator step by step to show how he or she can create performance based assessments for students including what they look like teaching students how to create them setting the proper classroom environment and how to evaluate them *Commutative Algebra* Irena Peeva, 2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted Algebraist David Eisenbud s 65th birthday It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Category Theory Combinatorics Computational Algebra Homological Algebra Hyperplane Arrangements and Non commutative Algebra The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research **Collected Papers** Armand

Borel,1983 This book collects the papers published by A Borel from 1983 to 1999 About half of them are research papers written on his own or in collaboration on various topics pertaining mainly to algebraic or Lie groups homogeneous spaces arithmetic groups L2 spectrum automorphic forms cohomology and covolumes L2 cohomology of symmetric or locally symmetric spaces and to the Oppenheim conjecture Other publications include surveys and personal recollections of D Montgomery Harish Chandra and A Weil considerations on mathematics in general and several articles of a historical nature on the School of Mathematics at the Institute for Advanced Study on N Bourbaki and on selected aspects of the works of H Weyl C Chevalley E Kolchin J Leray and A Weil The book concludes with an essay on H Poincaré and special relativity Some comments on and corrections to a number of papers have also been added **Statistical Mechanics of Lattice Systems**

Oliveira,G.-C. Rota,1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have

supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallée Poussin's beautiful *Cours d'Analyse Infinitésimale* Hausdorff's *Grundzüge der Mengenlehre* and Fréchet's *Espaces Abstraits* In addition I discovered Carathéodory's 1912 paper *Über das lineare Mass von Punktmengen* and Hausdorff's 1919 paper on *Dimension und Äusseres Mass* and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published [2] This background led to the work summarized in Part IV

and foremost they grow Thus their spatial mean field description involves a free boundary problem Second their interiors should be modeled as nontrivial porous media using constitutive equations Third at the end of anti cancer therapy a small number of malignant cells remain making the post treatment dynamics inherently stochastic Fourth the growth parameters of macroscopic tumors are non constant as are the parameters of anti tumor therapies Changes in these parameters may induce phenomena that are mathematically equivalent to phase transitions Fifth tumor vascular growth is random and self similar Finally the drugs used in chemotherapy diffuse and are taken up by the cells in nonlinear ways Mathematical Oncology 2013 will appeal to graduate students and researchers in biomathematics computational and theoretical biology biophysics and bioengineering
