Mathematical Literacy February March 2015:

Mathematical Literacy on Statistical Measures Christian Büscher, 2018-07-14 In most countries only very limited time resources are available for statistics education within mathematics education. Thus statistics education research needs to develop teaching learning arrangements that are compact and applicable to classrooms. Christian Büscher designs and investigates a compact teaching learning arrangement which aims at mathematical and reflective knowledge about statistics. Central results include the specification of the learning content of statistical measures, an empirical reconstruction of students' learning processes towards statistical measures and the identification of students' situated reflections about mathematics within their learning processes. [Compendium for Early Career Researchers in Mathematics Education](#) Gabriele Kaiser, Norma Presmeg, 2019-04-26 The purpose of this Open Access compendium, written by experienced researchers in mathematics education, is to serve as a resource for early career researchers in furthering their knowledge of the state of the field and disseminating their research through publishing. To accomplish this, the book is split into four sections: Empirical Methods; Important Mathematics Education Themes; Academic Writing and Academic Publishing; and a section Looking Ahead. The chapters are based on workshops that were presented in the Early Career Researcher Day at the 13th International Congress on Mathematical Education (ICME 13). The combination of presentations on methodological approaches and theoretical perspectives shaping the field in mathematics education research, as well as the strong emphasis on academic writing and publishing, offered strong insight into the theoretical and empirical bases of research in mathematics education for early career researchers in this field. Based on these presentations, the book provides a state-of-the-art overview of important theories from mathematics education and the broad variety of empirical approaches currently widely used in mathematics education research. This
