Motivation Math Level Seven:

The Common Class Rick Tobin, 2007-09 Few Americans would disagree that serious problems plague their country's education system. But what is the real reason for this serious malady? According to author and long time teacher Rick Tobin, the usual suspects beleaguered teachers, overcrowded classrooms, lack of funds, etc. aren't to blame. Tobin believes that critics of the educational system have totally missed the point and that educational reform is aimed in the wrong direction. In his view, academic failure is the direct result of a loss of faith in American democracy. Current teaching objectives and the laws governing schools are failing to emphasize moral responsibility and personal accountability, fundamental aspects of the ethical framework that form the basis of American democracy and American education. These problems stem from what Tobin terms a prevailing egoist culture in America that largely ignores moral character building and downplays the need for individual accountability. He contends there are millions of Americans who fall within nine classes of people who are largely responsible for our educational mediocrity. Rick Tobin doesn't mince words in this candid expose in which he also offers solutions for remedying our educational woes.

Sociocultural Research on Mathematics Education Bill Atweh, Helen Forgasz, Ben Nebres, 2013-03-07 This volume, the first to bring together research on sociocultural aspects of mathematics education, presents contemporary and international perspectives on social justice and equity issues that impact mathematics education. In particular, it highlights the importance of three interacting and powerful factors: gender, social, and cultural dimensions. *Sociocultural Research on Mathematics Education: An International Perspective* is distinguished in several ways. It is research based. Chapters report on significant research projects, present a comprehensive and critical summary of the research findings, and offer a critical discussion of research methods and theoretical perspectives undertaken in the area. It is future oriented, presenting recommendations for practice and policy, and identifying areas for further research. It deals with all aspects of formal and informal mathematics education and applications, and all levels of formal schooling. As the context of mathematics education rapidly changes with an increased demand for mathematically literate citizenship, an increased awareness of issues of equity, inclusivity, and accountability, and increased efforts for globalization of curriculum development, research questions are being raised more than ever before about the problems of teaching and learning mathematics from a non-cognitive science perspective. This book contributes significantly to addressing such issues and answering such questions. It is especially relevant for researchers, graduate students, and policymakers in the field of mathematics education.

Which Way Social

Justice in Mathematics Education? Leone Burton, 2003-02-28 This contributed volume explores equity and social justice within the field of mathematics education In part one Helga Jungwirth's introductory chapter provides a strong theoretical overview that is based in actual classroom behaviors and a typology that classifies the various interpretations found within this volume Also in part one Laurie Hart discusses developments in equity research in the United States Part two focuses on results of studies about social justice and their impact on learning in mathematics classrooms in various parts of the world For example in a chapter on Peru social justice does not just encompass gender but also inequalities in opportunities to learn such as problems of resources living and social conditions communal demands and language needs And part three focuses on computers as a resource to mathematics teaching The contributors raise several important social justice issues which have previously remained unresearched Although there are a number of chapters specifically dealing with gender many of the authors use one of the following strategies their gender specific questions are set in a wider socio cultural context they challenge what have threatened to become false orthodoxies or they raise other important issues These other issues include the meaning of democratic citizenship for mathematics classrooms the links between parents and children learning mathematics and the preconceptions of some teachers of underprivileged students in Australia Other chapters explore different forms of classroom communication participation and assessment The pieces on computers state that there is still not enough research to conclude whether computers in the mathematics classrooms are supportive of or detrimental to the learning of all students The one thing on which every author in this volume does agree is that social justice in mathematics education has still not been attained but that we must strive toward it to improve educational practices and society in general

investigate how various measures of student outcomes are influenced by these contextual factors Guiding Teams to Excellence With Equity John Krownapple, 2016-10-28 Guide your school through its cultural proficiency transformation Despite the best efforts of equity leaders our schools suffer from persistent inequities Guiding the Journey to Excellence with Equity is a must read for anyone who supports professional learning in our schools It defines a process of inside out growth that helps develop culturally proficient educators with the facilitation skills needed to navigate the obstacles that arise during equity transformations Written with an equity lens this book Includes a powerful vignette that illustrates common challenges and solutions Focuses on mental models for managing group energy Is grounded in a systems model for personal and organizational transformation Provides tools for planning culturally proficient learning experiences *Motivational Profiles in TIMSS Mathematics* Michalis P. Michaelides, Gavin T. L. Brown, Hanna Eklöf, Elena C. Papanastasiou, 2019-09-03 This open access book presents a person centered exploration of student profiles using variables related to motivation to do school mathematics derived from the IEA's Trends in International Mathematics and Science Study TIMSS data Statistical cluster analysis is used to identify groups of students with similar motivational profiles across grades and over time for multiple participating countries While motivational variables systematically relate to school outcomes linear relationships can obscure the diverse makeup of student subgroups each with varying combinations of motivation emotions and attitudes In this book a person centered analysis of distinct and meaningful motivational profiles and their differences on sociodemographic variables and mathematics performance broadens understanding about the role that motivation characteristics play in learning and achievement in mathematics Exploiting the richness of IEA's TIMSS data from many countries extracted clusters reveal consistent as well as certain nuanced patterns that are systematically linked to sociodemographic and achievement measures Student clusters with inconsistent motivational profiles were found in all countries mathematics self confidence then emerged as the variable more closely associated with average achievement The findings demonstrate that teachers researchers and policymakers need to take into account differential student profiles prioritizing techniques that target skill and competence in mathematics in educational efforts to develop student motivation
