Motorcycle Mot Test Centers:

Motorcycle Modification John Hardaker, 2024-10-21 Modification is an important part of the total experience for many motorcyclists in the search for individuality to make improvements or simply to make a beloved machine more suitable for their own use. It also supports a whole industry of parts suppliers, modifiers and manufacturers as well as providing the opportunity for all types of individual effort. All types of modification have one thing in common: the overriding need to see that the change does not make the machine less safe to ride than the original. This excellent book from John Hardaker proposes a simple method based on long established aircraft and aero engine practices of reviewing intended modification at an early stage so that any potential safety problems can be avoided. The book is more than just a simple manual; it is a fascinating history and in some ways a biography incorporating many memories from the author's long career, various related and unrelated thoughts, and a few original and possibly controversial suggestions which occurred to the author at the time of writing. Yet rather than preach, the author invites the reader to agree or disagree with any or all of these deviations from the basic method. In writing the book, the author avoids the intricate detail of complicated engineering theory so as to ensure that the text is readily understandable to all motorcyclists, especially those who do not claim to be professional engineers but are still contemplating modifying their machines or are simply interested in all things mechanical. Originally published in 2020, this digital edition includes the additional information from the second printed edition, in particular the conversion of two wheeled machines into three wheelers. If you are considering modifying your own motorcycle or are interested to read about one professional's experience in the field, this is the ideal addition to your bookshelf. *The new European motorcycle test* Great Britain: Parliament: House of Commons: Transport Committee, 2010-03-23. In April 2009 a new testing regime based on the Second EU Driving Licence Directive was introduced. Deadlines for implementation had not been met and when the new test was finally introduced it was met with intense criticism and safety concerns. The number of tests taken dropped dramatically in the first few months and the industry suggested that the new test regime would threaten many small businesses and jobs. The Committee was concerned to not only establish whether the test had gone wrong and how problems could be rectified but also to ensure lessons are learned before the implementation of the Third EU Driving Licence Directive. They concluded that they could not see why the Government failed to obtain derogation from certain speed requirements and that though many elements of the new regime were appropriate it was important to take into account the concerns expressed and consider what adjustments might be required. They also believe that training and instruction for the motorcycle test needs to develop and change to reflect the new test requirements. The off road module of the test also needs to be amended to allow candidates to adapt their riding to reflect prevailing weather, road and other circumstances. The development of better awareness of motorcyclists among other road users is also crucial and should not be neglected. Though the Government exceeded what was necessary to comply with the EU directive, the Committee believes they were right to do so. It is the

development of Multi Purpose Test Sites for which justification was weak and implementation inept which represents the least effective element
