

EVOLUTION BY NATURAL SELECTION

What are some differences you have seen in the characteristics of organisms over time?

Organisms have become more complex and more diverse over time.

Organisms differ in their traits or characteristics. How do these differences arise?

Organisms have different alleles or genes. Some organisms have beneficial traits that help them survive and reproduce.

What would happen if the traits of organisms changed over time? How would these changes affect the organisms?

Organisms with beneficial traits would survive and reproduce more often than those with less beneficial traits. Over time, the traits of the organisms would change, and the population would become more adapted to its environment.

How would the traits of organisms change over time? Explain the process of natural selection.

1. Organisms have different traits. Some traits are beneficial to the organism, while others are not. Organisms with beneficial traits are more likely to survive and reproduce.

2. Organisms with beneficial traits are more likely to survive and reproduce. This leads to a higher frequency of the trait in the population over time.

3. Organisms with beneficial traits are more likely to survive and reproduce. This leads to a higher frequency of the trait in the population over time. The trait becomes more common in the population.
