

Evolution and Selection

What mechanisms lead to changes in the diversity of species on Earth?

Why?

People make choices by selecting options they like best. The natural world also “selects” (although not as a conscious decision) when environmental conditions allow organisms with a particular genetic trait to live healthier lives than other organisms. In this activity, we will explore how selection affects populations over time.

Model 1 – Desktop Swab Results

1. What is the source of the bacteria in the culture tube in Model 1?
2. How many genetic variants of *E. coli* were present in the culture from the initial swab?
3. What variants of *E. coli* are found on the dish grown without triclosan?
4. Refer to the dish in Model 1 with the medium that included triclosan.
 - a. What variants of *E. coli* are found on the dish grown with triclosan?
 - b. What likely happened to the other variants of *E. coli* on the dish with the medium containing triclosan?
5. Based on its effect on *E. coli*, why is triclosan used as a cleaning agent?
6. Suppose the desktop swabbed earlier was cleaned with a solution containing triclosan. Would living *E. coli* remain? Support your answer.
7. Suppose the desktop was swabbed again after cleaning it with triclosan over a 9-month school year. When the sample was cultured only variant S was seen.
 - a. What characteristic does the variant S bacteria have that allows it to remain on the desktop even after several months of treatment with triclosan?
 - b. Is it likely that the bacteria in the new swab were on the desk 9-months ago, or are they offspring of the original bacteria?
 - c. Propose an explanation for the presence of only variant S on the desktop after so much time.

Evolution And Selection Pogil Answers:

Adaptation and Natural Selection George Christopher Williams, 2018-10-30 Biological evolution is a fact but the many conflicting theories of evolution remain controversial even today When Adaptation and Natural Selection was first published in 1966 it struck a powerful blow against those who argued for the concept of group selection the idea that evolution acts to select entire species rather than individuals Williams's famous work in favor of simple Darwinism over group selection has become a classic of science literature valued for its thorough and convincing argument and its relevance to many fields outside of biology Now with a new foreword by Richard Dawkins Adaptation and Natural Selection is an essential text for understanding the nature of scientific debate

Natural Selection J. Phil Gibson, Terri R. Gibson, 2009 In his groundbreaking book Natural Selection Charles Darwin explained his theory that evolution is driven by adaptation of species to their environmental surroundings From the tiniest microbe to the largest whale all organisms have changed over vast expanses of time due to the forces of natural selection This new title in the Science Foundations series provides an overview of the processes and causes that drive natural selection and the principles that explain how it operates using numerous diverse organisms as examples Natural Selection promotes a solid understanding of how organisms change over the course of generations and how current biodiversity came to be

Evolution For Dummies Greg Krukonis, Tracy L. Barr, 2011-04-20 Today most colleges and universities offer evolutionary study as part of their biology curriculums Evolution For Dummies will track a class in which evolution is taught and give an objective scientific view of the subject This balanced guide explores the history and future of evolution explaining the concepts and science behind it offering case studies that support it and comparing evolution with rival theories of creation such as intelligent design It also will identify the signs of evolution in the world around us and explain how this theory affects our everyday lives and the future to come

On the Origin of Species By Means of Natural Selection Charles Darwin, 2019-03-04 On the Origin of Species By Means of Natural Selection by Charles Darwin is a seminal anthology that reshapes our understanding of life through its comprehensive investigation of evolution and natural selection The principal story On the Origin of Species unveils the intricate mechanisms of natural selection challenging the conventional beliefs of species creation Darwin meticulously examines the rich biological diversity and the subtle forces of variation both domesticated and wild that influence the survival and evolution of species This narrative presents a thorough analysis of the struggle for existence and the concept of the survival of the fittest providing an in depth look at adaptation and competition in nature Darwin's exploration extends to hybridism instinct and the imperfections within the geological record presenting an interconnected view of all living organisms This anthology remains a pivotal piece for anyone interested in the subjects of evolution and natural selection offering a timeless reflection on humanity's place in the natural world Whether you're an expert in biology or a curious reader On the Origin of Species By Means of Natural Selection presents an essential perspective on the evolutionary processes that continue to shape life on

Earth inviting readers to delve into the profound story of life's origins and its ongoing transformation This anthology is a must read for those seeking a deeper understanding of the natural world and our shared heritage as it challenges us to reconsider our role in the ever evolving tapestry of life

Evolution by Natural Selection ,2006 **Evolution by natural selection** ,1973 Evolution by Natural Selection Michaelis Michael,2015-11-18 A persistent argument among evolutionary biologists and philosophers revolves around the nature of natural selection Evolution by Natural Selection Confidence Evidence and the Gap explores this argument by using a theory of persistence as an intentional foil to examine ways in which similar theories can be misunderstood It discusses Charles Dar *On the Origin of Species* Charles Darwin,2019-01-08 Charles Robert Darwin 12 February 1809 19 April 1882 was an English naturalist geologist and biologist best known for his contributions to the science of evolution His proposition that all species of life have descended over time from common ancestors is now widely accepted and considered a foundational concept in science In a joint publication with Alfred Russel Wallace he introduced his scientific theory that this branching pattern of evolution resulted from a process that he called natural selection in which the struggle for existence has a similar effect to the artificial selection involved in selective breeding Darwin published his theory of evolution with compelling evidence in his 1859 book *On the Origin of Species* overcoming scientific rejection of earlier concepts of transmutation of species By the 1870s the scientific community and a majority of the educated public had accepted evolution as a fact However many favoured competing explanations and it was not until the emergence of the modern evolutionary synthesis from the 1930s to the 1950s that a broad consensus developed in which natural selection was the basic mechanism of evolution Darwin's scientific discovery is the unifying theory of the life sciences explaining the diversity of life **Evolution and Animal Life** David Starr Jordan,Vernon Lyman Kellogg,1907

On the Origin of Species Charles Darwin,2013 *On the Origin of Species* has recently celebrated the 150th anniversary of its publication so what better time to read this ground breaking work of natural science It laid the foundation for the field of evolutionary biology which hinges on the theory that populations evolve over the course of generations through a process of natural selection 150 years later this is still a contentious issue it divides people who accept Darwin's theories as facts and those who think he's a fraud But how many of those who accept the ideas of evolution and natural selection can actually argue its case
