The Elements of Geometry George Bruce Halsted, 1886 *Non-Euclidean Geometry in the Theory of Automorphic Functions* Jacques Hadamard, 1999-01-01 This is the English translation of a volume originally published only in Russian and now out of print The book was written by Jacques Hadamard on the work of Poincare Poincare's creation of a theory of automorphic functions in the early 1880s was one of the most significant mathematical achievements of the nineteenth century It directly inspired the uniformization theorem led to a class of functions adequate to solve all linear ordinary differential equations and focused attention on a large new class of discrete groups It was the first significant application of non Euclidean geometry This unique exposition by Hadamard offers a fascinating and intuitive introduction to the subject of automorphic functions and illuminates its connection to differential equations a connection not often found in other texts

dating to the early part of the nineteenth century It concerns closed polygons inscribed in one conic and circumscribed about another The theorem is of great depth in that it relates to a large and diverse body of mathematics There are several proofs of the theorem none of which is elementary A particularly attractive feature of the theorem which is easily understood but difficult to prove is that it serves as a prism through which one can learn and appreciate a lot of beautiful mathematics The author's original research in queuing theory and dynamical systems figures prominently in the book This book stresses the

modern approach to the subject and contains much material not previously available in book form It also discusses the relation between Poncelet's theorem and some aspects of queueing theory and mathematical billiards The proof of Poncelet's theorem presented in this book relates it to the theory of elliptic curves and exploits the fact that such curves are endowed with a group structure The book also treats the real and degenerate cases of Poncelet's theorem These cases are interesting in themselves and their proofs require some other considerations The real case is handled by employing notions from dynamical systems The material in this book should be understandable to anyone who has taken the standard courses in undergraduate mathematics To achieve this the author has included in the book preliminary chapters dealing with projective geometry Riemann surfaces elliptic functions and elliptic curves The book also contains numerous figures illustrating various geometric concepts

Thinking Geometrically Thomas Q. Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no
