and thought experiments integrated with experimental investigations and mathematical analyses She presents a view of constructed models as hybrid objects serving as intermediaries between targets and analogical sources in bootstrapping processes Extending these results she argues that these complex cognitive operations and structures are not mere aids to discovery but that together they constitute a powerful form of reasoning model based reasoning that generates novelty This new approach to mental modeling and analogy together with Nersessian s cognitive historical approach make Creating Scientific Concepts equally valuable to cognitive science and philosophy of science S.A.E.
