Guest, Claus Hertling, 2017-10-14 The purpose of this monograph is two fold it introduces a conceptual language for the geometrical objects underlying Painlevé equations and it offers new results on a particular Painlevé III equation of type PIII D6 called PIII 0 0 4 4 describing its relation to isomonodromic families of vector bundles on P^1 with meromorphic connections This equation is equivalent to the radial sine or sinh Gordon equation and as such it appears widely in geometry and physics It is used here as a very concrete and classical illustration of the modern theory of vector bundles with meromorphic connections Complex multi valued solutions on \mathbb{C} are the natural context for most of the monograph but in the last four chapters real solutions on \mathbb{R}^0 with or without singularities are addressed These provide examples of variations of TERP structures which are related to tt geometry and harmonic bundles As an application a new global picture \mathcal{O}_0 is given

Foundations of Arithmetic Differential Geometry Alexandru Buium, 2023-11-20 The aim of this book is to introduce and develop an arithmetic analogue of classical differential geometry In this new geometry the ring of integers plays the role of a ring of functions on an infinite dimensional manifold The role of coordinate functions on this manifold is played by the prime numbers The role of partial derivatives of functions with respect to the coordinates is played by the Fermat quotients of integers with respect to the primes The role of metrics is played by symmetric matrices with integer coefficients The role of connections respectively curvature attached to metrics is played by certain adelic respectively global objects attached to the corresponding matrices One of the main conclusions of the theory is that the spectrum of the integers is intrinsically curved the study of this curvature is then the main task of the theory The book follows and builds upon a series of recent research papers A significant part of the material has never been published before **Nonarchimedean and Tropical Geometry** Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical

geometry which took place on the island of St John in April 2013 and in Puerto Rico in February 2015 Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research interspersed with lively discussions and collaborative work in small groups The articles collected here which include high level surveys as well as original research mirror the main themes of the two Symposia Topics covered in this volume include Differential forms and currents and solutions of Monge Ampere type differential equations on Berkovich spaces and their skeletons The homotopy types of nonarchimedean analytifications The existence of faithful tropicalizations which encode the topology and geometry of analytifications Relations between nonarchimedean analytic spaces and algebraic geometry including logarithmic schemes birational geometry and the geometry of algebraic curves Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces and Relations between nonarchimedean geometry and combinatorics including deep and fascinating connections between matroid theory tropical geometry and Hodge theory

Frobenius Subsequent chapters deal with the Levi Civita connection geodesics the Riemann curvature tensor a proof of the Cartan Ambrose Hicks theorem as well as applications to flat spaces symmetric spaces and constant curvature manifolds Also included are sections about manifolds with nonpositive sectional curvature the Ricci tensor the scalar curvature and the Weyl tensor An additional chapter goes beyond the scope of a one semester lecture course and deals with subjects such as conjugate points and the Morse index the injectivity radius the group of isometries and the Myers Steenrod theorem and Donaldson s differential geometric approach to Lie algebra theory

Generalized Ricci Flow Mario Garcia-Fernandez,Jeffrey Streets,2021-04-06 The generalized Ricci flow is a geometric evolution equation which has recently emerged from investigations into mathematical physics Hitchin s generalized geometry program and complex geometry This book gives an introduction to this new area discusses recent developments and formulates open questions and conjectures for future study The text begins with an introduction to fundamental aspects of generalized Riemannian complex and K hler geometry This leads to an extension of the classical Einstein Hilbert action which yields natural extensions of Einstein and Calabi Yau structures as canonical metrics in generalized Riemannian and complex geometry The book then introduces generalized Ricci flow as a tool for constructing such metrics and proves extensions of the fundamental Hamilton Perelman regularity theory of Ricci flow These results are refined in the setting of generalized complex geometry where the generalized Ricci flow is shown to preserve various integrability conditions taking the form of pluriclosed flow and generalized K hler Ricci flow leading to global convergence results and applications to complex geometry Finally the book gives a purely mathematical introduction to the physical idea of T duality and discusses its relationship to generalized Ricci flow The book is suitable for graduate students and researchers with a background in Riemannian and complex geometry who are interested in the theory of geometric evolution equations

Loop Quantum Gravity: The First 30 Years Abhay Ashtekar,Jorge Pullin,2017-03-16 Written by young theoretical physicists who are experts in the field this volume is meant both to provide an introduction to the field and to offer a review of the latest developments not discussed in many other existing books for senior researchers It will also appeal to scientists who do not work directly on LQG but are interested in issues at the interface of general relativity and quantum physics CERN CourierThis volume presents a snapshot of the state of the art in loop quantum gravity from the perspective of younger leading researchers It takes the reader from the basics to recent advances thereby bridging an important gap The aim is two fold to provide a contemporary introduction to the entire field for students and post docs and to present an overview of the current status for more senior researchers The contributions include the latest developments that are not discussed in existing books particularly recent advances in quantum dynamics both in the Hamiltonian and sum over histories approaches and applications to cosmology of the early universe and to the quantum aspects of black holes

Social Networks with Rich Edge Semantics Quan Zheng,David Skillicorn,2017-08-15 Social Networks with Rich Edge Semantics introduces a new mechanism for representing social networks in which pairwise relationships can be drawn from a range of realistic possibilities including different types of relationships different strengths in the directions of a pair positive and negative relationships and relationships whose intensities change with time For each possibility the book shows how to model the social network using spectral embedding It also shows how to compose the techniques so that multiple edge semantics can be modeled together and the modeling techniques are then applied to a range of datasets Features Introduces the reader to difficulties with current social network analysis and the need for richer representations of relationships among nodes including accounting for intensity direction type positive negative and changing intensities over time Presents a novel mechanism to allow social networks with qualitatively different kinds of relationships to be described and analyzed Includes extensions to the important technique of spectral embedding shows that they are mathematically well motivated and proves that their results are appropriate Shows how to exploit embeddings to understand structures within social networks including subgroups positional significance link or edge prediction consistency of role in different contexts and net flow of properties through a node Illustrates the use of the approach for real world problems for online social networks criminal and drug smuggling networks and networks where the nodes are themselves groups Suitable for researchers and students in social network research data science statistical learning and related areas this book will help to provide a deeper understanding of real world social networks *Learning Gardens and Sustainability Education* Dilafruz
