investigations carried out by the authors worldwide. The different topics are profusely illustrated with color figures and images from all continents and climates showing the scientific and aesthetic appeal of karst environments. The book covers in a systematic way the significant features of karst rocks, the chemistry and kinetics of their dissolution, the rate and distribution of karst denudation, the unique hydrogeology of karst terrains, the landforms endemic to karst, the morphology of caves and their diverse sedimentary records and the multiple processes that lead to the formation of underground voids. Overall the work reflects the increasing recognition of karst as a fundamental part of the Earth's dynamic systems and helps readers understand this multidisciplinary field from a holistic and nuts and bolts perspective. Some of the ideas discussed within the book include How karst is gaining importance for human development because of its valuable resources, groundwater and associated environmental problems, impacts and hazards. The enormous technological developments achieved in recent years. Recent major breakthroughs in the field and their influence on other scientific disciplines. The central role played by karst science for understanding and mitigating global environmental issues, global warming, depletion of resources, human induced hazards. For all scientists working in karst and for students and lecturers of karst related programs this book serves as a valuable all in one source. It is also a valuable resource for professional hydrogeologists, the petroleum industry, environmental geologists and of course speleologists, the last true geographic explorers in the world.

**Global Geomorphology** Michael A. Summerfield, 2014-05-12. The plate tectonics revolution in the earth sciences has provided a valuable new framework for understanding long term landform development. This innovative text provides a comprehensive introduction to the subject of global geomorphology with the emphasis placed on large scale processes and phenomena. Integrating global tectonics into the study of landforms and incorporating planetary geomorphology as a major component the author discusses the impact of climatic change and the role of catastrophic events on landform genesis and includes a comprehensive study of surface geomorphic processes.

**Geomorphology of Desert Environments** Anthony J. Parsons, A. D. Abrahams, 2009-03-20. About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change. Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology.
