Applied Geomorphology R. J. Allison, 2002-06-14 Erstmals wurden in diesem Buch praktische Beispiele geomorphologischer Daten aus der ganzen Welt zusammengetragen um zu zeigen wie sich mit Hilfe dieser Informationen präzise Vorschläge zur Landnutzung und zur Abschätzung von Katastrophenrisiken erarbeiten lassen Fallstudien zeigen wie sich Risiken erkennen lassen Experten kommentieren jeweils den neuesten Stand der Forschung Nicht zuletzt zeigt der Autor auch wann man einen Missbrauch der Umwelt mit geomorphologischen Mitteln korrigieren kann *Geology and Geomorphology of Alluvial and Fluvial Fans* D. Ventra, L.E. Clarke, 2018-07-04 Alluvial and fluvial fans are the most widespread depositional landform bordering the margins of highland regions and actively subsiding continental basins across a broad spectrum of tectonic and climatic settings They are significant to the local morphodynamics of mountain regions and also to the evolution of sediment routing systems affecting the propagation and preservation of stratigraphic signals of environmental change over vast areas The volume presents case studies discussing the geology and geomorphology of alluvial and fluvial fans from both active systems and ancient ones preserved in the stratigraphic record It brings together case studies from a range of continents climatic and tectonic settings some introducing innovative monitoring and analysis techniques and it provides an overview of current debates in the field This volume will be of particular interest to geologists geomorphologists sedimentologists and the general reader with an interest in Earth science **Encyclopedia of Geomorphology** Andrew Goudie, 2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest

productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Although statistics have been used by geologists for many years only recently has the subject received the attention needed and deserved Geologists and other earth scientists have a use for summary statistics of large data bases knowledge of frequency distributions understanding of sampling designs and problems and application of stochastic models but in general they are unaware of the many aspects of help available through the statistician It seemed warranted at this time to get the two disciplines together and to find a common meeting ground for further collaboration Thus the subject of the 8th Colloquium was proposed as GEOSTATISTICS Statisticians with interests in applications in the earth sciences were asked to participate with earth scientists interested in applying statistics to problems This volume records the proceedings of the meeting The Kansas Geological Survey the International Association for Mathematical Geology and the University Extension were hosts to 120 participants on campus at The University of Kansas during 7-9 June 1970 The Colloquium was the 8th in a series on Computer Applications in the Earth Sciences Previous subjects were classification trend analysis time series analysis simulation sampling computer applications and optical data processing The stated purpose of the meeting was to explore some assumptions limitations and applications for statistical geology and geostatistics
