A deep sea diver notices that the intensity of light, I , below the surface of the ocean decreases with depth, d , according to the formula

$$I = k(L - 0.05)^{-2},$$

where L is expressed as a percentage, d is the depth in metres below the surface and k is a constant.

The intensity of light at the surface is 100 %.

(a) Calculate the value of k .

$$100 = k(L - 0.05)^{-2}$$

[2 marks]

(b) Find the intensity of light at a depth 25 m below the surface.

[2 marks]

To be able to see clearly, a diver needs the intensity of light to be at least 85 %.

(c) Using your graphic display calculator, find the greatest depth below the surface at which she can see clearly.

[2 marks]

The table below gives the intensity of light (correct to the nearest integer) at different depths.

Depth (d)	0	10	20	30	40
Intensity (I)	100	61	38	9	2

(d) Using this information draw the graph of I against d for $0 \leq d \leq 100$. Use a scale of 1 cm to represent 10 metres on the horizontal axis and 1 cm to represent 10 % on the vertical axis.

[4 marks]

Some sea creatures have adapted so they can see in low intensity light and cannot tolerate too much light.

on your graph the range of depths sea creatures could inhabit are between 5 % and 15 % of the light intensity at the surface.

Some Musings on Theta, Eta, and Zeta Floyd L. Williams, 2023-11-02 This book continues the applications of mathematics more specifically of theta eta and zeta functions and modular forms to various areas of theoretical physics It is a follow up and extension in some sense of the author's earlier book entitled A window into zeta and modular physics Some of the main topics are

- 1 A new approach to logarithmic corrections to black hole entropy
- 2 My recent work that provides for an explicit cold plasma black hole connection
- 3 Generalization of work of physicists on certain asymptotic problems relating to string theory for example by way of the general theory of modular forms of non positive weight
- 4 A construction of the E_8 root lattice its theta function and its relevance for heterotic string theory
- 5 Applications of elliptic functions to KdV nonlinear Schrödinger and Duffing equations for example including a discussion of Lax pairs and the Miura transformation
- 6 Finite temperature zeta functions and partition functions for quantum fields in thermal equilibrium on various curved background spacetimes
- 7 Exact solutions of the Einstein gravitational field equations for Lemaitre and inhomogeneous cosmological models with a special focus on the Szekeres-Szafron exact solutions by way of the Weierstrass elliptic function
- 8 Elementary particles and my zeta function formula for higher spin fermionic particles this covers in particular the gravitino particle of spin $3/2$ and bosons with integral spin $s = 2, 3, 4, 5$

These are some sample topics Others include the continuous Heisenberg model reaction diffusion systems Dirichlet and Hecke L functions the modular j invariant the computation of the one loop effective potential for non compact symmetric spaces the BTZ black hole Jacobi inversion formulas etc Thus there is a very large range of material with the first 9 chapters of preliminary expository background for mathematicians and physicists

Managing Ocean Environments in a Changing Climate Kevin J. Noone,Ussif Rashid Sumaila,Robert J. Diaz,2013-06-29 Managing Ocean Environments in a Changing Climate summarizes the current state of several threats to the global oceans What distinguishes this book most from previous works is that this book begins with a holistic global scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale for the Pacific region Previous works usually have compiled local studies which are essentially impossible to properly integrate to the global scale The editors have engaged leading scientists in a number of areas such as fisheries and marine ecosystems ocean chemistry marine biogeochemical cycling oceans and climate change and economics to examine the threats to the oceans both individually and collectively provide gross estimates of the economic and societal impacts of these threats and deliver high level recommendations Nominated for a Katerva Award in 2012 in the Economy category State of the science reviews by known marine experts provide a concise readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services

Beaumont,2024-06-24 States do not only strive for wealth and security but international status too A burgeoning body of research has documented that states of all sizes spend considerable time energy and even blood and treasure when seeking status on the world stage Yet for all scholars success in identifying instances of status seeking they lack agreement on the nature of the international hierarchies that states are said to compete within Making sense of this status ambiguity remains the key methodological and theoretical challenge facing status research in international relations scholarship In The Grammar of Status Competition Paul David Beaumont tackles this puzzle head on by making a strength out of status widely acknowledged slipperiness Given that states statesmen and citizens care about and pursue status despite its difficulty to assess Beaumont argues that we can study international status hierarchies through these actors attempts to grapple with this same status ambiguity The book thus redirects inquiry toward the theories of international status TIS that governments and citizens themselves produce and use to make sense of their state s position in the world Advancing a new framework for studying such TIS the book illuminates how specific theories of international status emerge solidify and become contested and how these processes influence domestic and foreign policy Showcasing the value of a TIS approach via multiple historical case studies from nuclear arms control to Norwegian education policy Beaumont thereby addresses three major puzzles in IR status research why states compete for status when the international rewards seem ephemeral how states can escape the zero sum game associated with quests for positional status and how status scholars can overcome the methodological problem of disentangling status from other motivations Paper Trails Cameron Blevins,2021

Finney,Sara S. McAllister,Jason M.

Forthofer,Torben P. Grumstrup,2021-11 Wildland fires have an irreplaceable role in sustaining many of our forests shrublands and grasslands They can be used as controlled burns or occur as free burning wildfires and can sometimes be dangerous and destructive to fauna human communities and natural resources Through scientific understanding of their behaviour we can develop the tools to reliably use and manage fires across landscapes in ways that are compatible with the constraints of modern society while benefiting the ecosystems The science of wildland fire is incomplete however Even the

simplest fire behaviours how fast they spread how long they burn and how large they get arise from a dynamical system of physical processes interacting in unexplored ways with heterogeneous biological ecological and meteorological factors across many scales of time and space The physics of heat transfer combustion and ignition for example operate in all fires at millimetre and millisecond scales but wildfires can become conflagrations that burn for months and exceed millions of hectares Wildland Fire Behaviour Dynamics Principles and Processes examines what is known and unknown about wildfire behaviours The authors introduce fire as a dynamical system along with traditional steady state concepts They then break down the system into its primary physical components describe how they depend upon environmental factors and explore system dynamics by constructing and exercising a nonlinear model The limits of modelling and knowledge are discussed throughout but emphasised by review of large fire behaviours Advancing knowledge of fire behaviours will require a multidisciplinary approach and rely on quality measurements from experimental research as covered in the final chapters
