

(Question 2 continued)

(b) The variation of d with W is shown.

Outline one experimental reason why the graph does not go through the origin.

[1]

The weight of the ruler also causes the ruler to bend down slightly.

(c) Theory predicts that

$$d \propto \frac{W^x L^y}{EI}$$

where E and I are constants. The fundamental units of I are m^4 and those of E are $\text{kg m}^{-1} \text{s}^{-2}$.

Calculate x and y .

[2]

$$\begin{aligned}
 EI \cdot d &\propto W^x L^y \\
 [EI d] &= \text{kg m}^{-1} \text{s}^{-2} \cdot \text{m}^4 \cdot \text{m} \\
 &= \text{kg m}^4 \text{s}^{-2} = \underbrace{\text{kg m s}^{-2}}_1 \cdot \underbrace{\text{m}^3}_3 = \text{N}^1 \cdot \text{m}^3 = [W]^x \cdot [L]^y = \text{N}^x \cdot \text{m}^y \\
 &\quad \text{compare the powers} \quad \therefore x=1, y=3
 \end{aligned}$$

Niels Bohr's Times, 1991-10-17 Niels Bohr's life spans times of revolutionary change in science and in its impact on society. Along with Einstein, Bohr can be considered as this century's major driving force behind the new mathematical and philosophical descriptions of the atom, the nucleus, and all that resulted from them. Abraham Pais, the acclaimed biographer of Einstein, traces Bohr's progress from his well-to-do origins in late nineteenth century Denmark to his central position in the world political scene, particularly because of the development of nuclear weapons during the Second World War. Bohr was one of the great enabling figures in modern science, not only because of his direct involvement in the application of quantum theory to our understanding of the structure of the atom, but also because he gathered around him in Copenhagen most of the brightest young minds of the period. Figures like Pauli, Dirac, and Heisenberg all required Bohr's imprimatur to varying degrees before they considered their work ready for widespread consumption. He had a complex relationship with Einstein, both in terms of their fundamental disagreements and their profound though distant mutual respect. He owed an important debt to his mentor Rutherford, a man who came to serve in many ways as his role model. Pais describes the state of physics before Bohr and considers his legacy, both theoretical and practical. But more than this, he captures the essence of Bohr, the intensely private family man who, despite appalling personal tragedy, became one of the best loved cultural figures of recent times.

Applied Building Physics Hugo S. L. Hens, 2016-04-25 Bad experiences with construction quality, the energy crises of 1973 and 1979, complaints about sick buildings, thermal, acoustical, visual, and olfactory discomfort, the need for good air quality, the move towards more sustainability: all these have accelerated the development of a field that for a long time was hardly more than an academic exercise: building physics. The discipline embraces domains such as heat and mass transfer, building acoustics, lighting, indoor environmental quality, and energy efficiency. In some countries, fire safety is also included. Through the application of physical knowledge and its combination with information coming from other disciplines, the field helps to understand the physical phenomena governing building parts, building envelope, whole building, and built environment performance. Although for the last the wording urban physics is used, building physics has a real impact on performance-based building design. This volume on Applied Building Physics discusses the heat, air, and moisture performance metrics that affect building design, construction, and retrofitting.

Handbook of Environmental Degradation of Materials Myer Kutz, 2005-06-02 Industry pays an enormous price for material degradation. The Handbook of Environmental Degradation of Materials outlines these costs but more importantly explains how to measure, analyze, and prevent environmental degradation for a wide range of industrial materials. Experts from around the world share how a diverse set of industries cope with the degradation of metals.

polymers reinforced concrete clothing and wood under adverse environmental conditions such as weather seawater and fire Case studies show how organizations from small consulting firms to corporate giants design and manufacture products that are more resistant to environmental effects By implementing these standards companies of all sizes should realize savings beneficial to their operations

From Representation Theory to Mathematical Physics and Back Mikhail Khovanov, Joshua Sussan, Anton Zeitlin, 2025-05-14 This volume is a proceedings of a workshop at the Simons Center for Geometry and Physics from May 31 June 4 2022 The workshop highlighted progress in the areas of vertex operator algebras conformal field theory categorification low dimensional topology and representation theory of affine Lie algebras loop groups and quantum groups In the past 40 years string theory gave rise to the mathematical theory of vertex operator algebras which led to the construction of representations of affine Lie algebras and the Moonshine module of the Monster group These mathematical constructions have in turn led to ideas about 3 dimensional quantum gravity In another direction the discovery of the Jones polynomial led to a physical construction of 3 dimensional topological quantum field theories TQFTs which in turn advanced many mathematical developments in quantum groups and low dimensional topology Louis Crane and Igor Frenkel introduced the categorification program with the goal of upgrading 3 dimensional TQFTs coming from representation theory of quantum groups to 4 dimensional TQFTs This idea gave rise to the development of link homologies constructed from representation theoretic algebraic geometric combinatorial and physical structures Articles in this volume present both classical and new results related to these topics They will be interesting to researchers and graduate students working in mathematical aspects of modern quantum field theory

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design

should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **The Athenaeum** ,1875 The Engineer ,1919
