IBM Information Governance Solutions Chuck Ballard, John Baldwin, Alex Baryudin, Gary Brunell, Christopher Giardina, Marc Haber, Erik A O'Neill, Sandeep Shah, IBM Redbooks, 2014-04-04 Managing information within the enterprise has always been a vital and important task to support the day to day business operations and to enable analysis of that data for decision making to better manage and grow the business for improved profitability To do all that clearly the data must be accurate and organized so it is accessible and understandable to all who need it That task has grown in importance as the volume of enterprise data has been growing significantly analyst estimates of 40 50% growth per year are not uncommon over the years However most of that data has been what we call structured data which is the type that can fit neatly into rows and columns and be more easily analyzed Now we are in the era of big data This significantly increases the volume of data available but it is in a form called unstructured data That is data from sources that are not as easily organized such as data from emails spreadsheets sensors video audio and social media sites There is valuable information in all that data but it calls for new processes to enable it to be analyzed All this has brought with it a renewed and critical need to manage and organize that data with clarity of meaning understandability and interoperability That is you must be able to integrate this data when it is from within an enterprise but also importantly when it is from many different external sources What is described here has been and is being done to varying extents It is called information governance Governing this information however has proven to be challenging But without governance much of the data can be less useful and perhaps even used incorrectly significantly impacting enterprise decision making So we must also respect the needs for information security consistency and validity or else suffer the potential economic and legal consequences Implementing sound governance practices needs to be an integral part of the information control in our organizations This IBM Redbooks publication focuses on the building blocks of a solid governance program It examines some familiar governance initiative scenarios identifying how they underpin key governance initiatives such as Master Data Management Quality Management Security and Privacy and Information Lifecycle Management IBM Information Management and Governance solutions provide a comprehensive suite to help organizations better understand and build their governance solutions The book also identifies new and innovative approaches that are developed by IBM

practice leaders that can help as you implement the foundation capabilities in your organizations *Policy-Based Autonomic Data Governance* Seraphin Calo, Elisa Bertino, Dinesh Verma, 2019-04-24 Advances in artificial intelligence sensor computing robotics and mobile systems are making autonomous systems a reality At the same time the influence of edge computing is leading to more distributed architectures incorporating more autonomous elements The flow of information is critical in such environments but the real time distributed nature of the system components complicates the data protection mechanisms Policy based management has proven useful in simplifying the complexity of management in domains like networking security and storage it is expected that many of those benefits would carry over to the task of managing big data and autonomous systems This book aims at providing an overview of recent work and identifying challenges related to the design of policy based approaches for managing big data and autonomous systems An important new direction explored in the book is to make the major elements of the system self describing and self managing This would lead to architectures where policy mechanisms are tightly coupled with the system elements In such integrated architectures we need new models for information assurance traceability of information and better provenance on information flows In addition when dealing with devices with actuation capabilities and thus being able to make changes to physical spaces safety is critical With an emphasis on policy based mechanisms for governance of data security and privacy and for safety assurance the papers in this volume follow three broad themes foundational principles and use cases for the autonomous generation of policies safe autonomy policies and autonomy in federated environments Information Governance Principles and Practices for a Big Data Landscape Chuck Ballard, Cindy Compert, Tom Jesionowski, Ivan Milman, Bill Plants, Barry Rosen, Harald Smith, IBM Redbooks, 2014-03-31 This IBM Redbooks publication describes how the IBM Big Data Platform provides the integrated capabilities that are required for the adoption of Information Governance in the big data landscape As organizations embark on new use cases such as Big Data Exploration an enhanced 360 view of customers or Data Warehouse modernization and absorb ever growing volumes and variety of data with accelerating velocity the principles and practices of Information Governance become ever more critical to ensure trust in data and help organizations overcome the inherent risks and achieve the wanted value The introduction of big data changes the information landscape Data arrives faster than humans can react to it and issues can quickly escalate into significant events The variety of data now poses new privacy and security risks The high volume of information in all places makes it harder to find where these issues risks and even useful information to drive new value and revenue are Information Governance provides an organization with a framework that can align their wanted outcomes with their strategic management principles the people who can implement those principles and the architecture and platform that are needed to support the big data use cases The IBM Big Data Platform coupled with a framework for Information Governance provides an approach to build manage and gain significant value from the big data landscape *Data Science and Big Data Analytics- Process and practices* Arun Kumar Mittapelly, Nagi reddy Karri, Gowtham
