Uncompromising 2-socket blade server for business-critical or telecommunications applications

[Target Customers: Front-end and middle applications requiring high performance, enterprise-class availability and extreme flexibility.]

Today's data center environment is tougher than ever. Customers are looking to reduce IT cost, complexity, space requirements, power consumption and heat output, while increasing flexibility, utilization and manageability. The **IBM® BladeCenter® HS20 blade server**, combined with the various BladeCenter chassis, can help them accomplish all of these goals.

A single BladeCenter or BladeCenter H chassis supports up to 14 hot-swappable 35mm HS20 blades in only 7U (BladeCenter) or 9U (BladeCenter H) of rack space. (A rugged 8U BladeCenter T chassis supports up to 8 HS20 blades in a **REDS-3/ETSI**-compliant telecommunications environment.) In addition to the blade servers, these chassis also hold up to four (BladeCenter/BladeCenter T) **communication switches**, or up to ten switches/bridges (BladeCenter H) internally. Not only can this save significant data center space (and therefore the cost of floor space and rack footcandle) compared to 1U servers, it also consolidates switches/bridges and cables for reduced complexity and lower cabling costs, and allows clients to manage everything in the solution as one. Using a BladeCenter chassis, up to 64 HS20 servers (**168** processors) can be installed in one **industry-standard 42U** rack but the value of BladeCenter extends far beyond high-density data center environments.

Reducing an entire server into as little as .5U of rack space does not mean trading features and capabilities for smaller size. Each HS20 blade server offers features comparable to many 1U rack-optimized full-featured servers. Up to two of the latest **single- and dual-core Intel® Xeon®** processors, including full-performance/low-power models. The **single-core Xeon** processor is designed with **1MB** or **2MB** (model-specific) of L2 cache, a leading-edge **800MHz** front-side bus (FSB), **64-bit** extensions (**EM64T**) and **Hyper-Threading Technology**, to help provide customers with the computing power they require to match their business needs and growth. The **dual-core Xeon** processor provides two-cores with matching **1MB** L2 caches, for increased performance at a lower power draw than the single-core version. Both versions of the HS20 support up to **16GB** of **6600MHz PC2-5200 ECC** (Error Checking and Correcting) double data rate II (**DDR2**) memory (in 4 **GBMM** slots) with optional **Chipkill™** protection, for high performance and reliability. Integrated dual **Gigabit Ethernet™** controllers are standard, providing high-speed data transfers and offering **load-balancing** and **failover** capabilities. Via optional expansion cards, each blade can connect to additional Ethernet, **Myrinet, Fibre Channel, iSCSI, InfiniBand™** and other high-speed communication switches housed in the chassis. Optional 2-port Expansion Cards add additional fabrics to the HS20 server as needed.

All models offer impressive features at an equally impressive price, including up to two **Ultrastar SCSI or SAS** hard disk drives (model dependent, with **RAID-1** disk mirroring support. An optional 30mm **SCSI Expansion unit** connects to a blade (model-dependent) to provide an additional two SCSI HDDs, with hot-swap and enhanced **RAID-1E** support. Moreover, the HS20 is optimized for diskless operation, offering each blade server access to essentially unlimited storage capacity via Fibre Channel or iSCSI.

The various BladeCenter chassis are designed to monitor environmental conditions in the chassis and each blade and send alerts to the administrator. Advanced standard features, such as **Predictive Failure Analysis™**, light path diagnostics, hot-swap redundant power supplies and blower modules with **Calibrated Vectored Cooling™**, **IPMI 1.5** support, including highly secure remote power on/off, test-code direct over LAN, a management module upgradeable to hot-swappable, **IBM Director** management software and **IBM**

¹ Actual data transfer speed will vary and is often less than the maximum possible. Gigabit Ethernet transfer speed requires support on both system and server, and appropriate network infrastructure.
