Biology and Pathogenesis of Legionella Hayley Newton, Elizabeth Hartland, Matthias Machner, 2018-12-07 *Legionella pneumophila* was first isolated as the causative agent of a deadly infectious pneumonia at a convention of the American Legion forty years ago Since then Legionnaires disease continues to be a significant public health concern Today our understanding of the *Legionella* genus comprising environmental bacteria and opportunistic human pathogens has dramatically increased The study of how pathogenic *Legionella* interact with host cells both protozoan and mammalian has

not only taught us about host pathogen interactions but has revealed novel and unexpected insights into human cell biology and immunology The capacity of pathogenic Legionella to commandeer cellular processes such as eukaryotic vesicular trafficking to establish an ER like replicative niche reflects the exquisite ability of this pathogen to manipulate eukaryotic cell biology in order to replicate in an intracellular compartment This requires the specific and targeted action of a cohort of translocated bacterial effector proteins In addition we have learnt much about cell autonomous innate immune sensing of intracellular bacteria through the inability of L pneumophila to avoid intracellular mammalian defense mechanisms Now in the age of large scale comparative omics it is clear that different Legionella species utilize different cohorts of effectors to replicate inside eukaryotic cells While we understand some of the strategies employed by L pneumophila and L longbeachae to replicate within eukaryotic cells there is still much to learn about many aspects of the Legionella life cycle This Research Topic highlights the latest findings regarding the biology of Legionella species their interactions with eukaryotic host cells and how the application of various technologies has increased our understanding of this important pathogen

Drug Hypersensitivity: From Mechanisms to Improved Diagnosis and Standards of Care Maria Jose Torres, Antonino Romano, Tahia Diana Fernández, 2021-08-18

Two Dimensions of Meaning Andrew Goatly, 2022-09-30 The book takes as its point of departure the notion that similarity and contiguity are fundamental to meaning It shows how they manifest in oral literate print and internet cultures in language acquisition pragmatics dialogism classification the semantics of grammar literature and most centrally metaphor and metonymy The book situates these reflections on similarity and contiguity in the interplay of language cognition culture and ideology and within broader debates around such issues as capitalism biodiversity and human control over nature Positing that while similarity focused systems can be reductive and have therefore been contested in social science philosophy and poetry and contiguity based ones might disregard useful statistical and scientific evidence Andrew Goatly argues for the need for humans to entertain diverse metaphors models and languages as ways of understanding and acting on our world The volume also considers the cognitive connections between the similarity contiguity duality and the noun verb distinction This innovative volume will appeal to scholars involved in wider debates on meaning within the fields of cognitive semantics pragmatics metaphor and metonymy theory critical discourse analysis and the philosophy of language Equally the motivated and intelligent general reader interested in language philosophy culture and ecology should find the later chapters of the book fascinating and the earlier technical chapters accessible
