Building Procurement Roy Morledge,Adrian J. Smith,2013-02-19 As an industrial process construction is unique in that the method of procurement of any built asset building infrastructure or process plant defines many of the subsequent management processes that take place during the building phase a very different situation to the purchase of goods and services in most other industries The procurement process is therefore central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase so a good understanding of the methods of procurement and the influence it has on project success is essential for all those working in the industry Much has changed in the global construction industry since publication of the first edition of Building Procurement for example the global liquidity banking crisis and the debt burden of many major economies This new edition has been rewritten to take account of these significant developments but at its core it continues to provide a critical examination and review of current procurement practices in the UK continental Europe including EU procurement procedures China and the USA It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management Review of the first edition a thorough and comprehensive investigation of building procurement Construction Management and Economics

Added Value in Design and Construction Allan Ashworth,Keith Hogg,2014-07-30 Added Value in Design and Construction takes a holistic student centred approach to offering public and private sector clients the ultimate reward doing more for less The Latham Report was a call to action and this book provides students of construction with the theoretical and practical knowledge to deliver the recommendations of the report It describes the principles and techniques crucial to adding value and reducing costs in design and construction in the twenty first century This book examines in detail a wide range of strategies that can be applied during the design and construction process to add value and bring the best interests of the client sharply into focus

Construction Microeconomics Christian Brockmann,2023-01-17 CONSTRUCTION MICROECONOMICS Unique and comprehensive reference describing microeconomic approaches theories and models adapted to and developed for the construction industry Construction Microeconomics provides comprehensive coverage of microeconomics applied to the construction industry focusing on

construction clients who initiate construction projects and on contractors who transform the ideas and plans of clients into infrastructure and buildings With the help of microeconomic theory it tries to answer questions about decision making by clients contractors and governments with respect to projects in the built environment It includes discussions of alternative theories to mainstream microeconomics such as new institutional economics behavioral economics and the capability approach Applications from the construction sector including land supply sustainability industrialization and lean construction are provided to ground the theory in practical construction In Construction Microeconomics readers will learn How microeconomic theory relies heavily on assumptions for modeling and the nuances of adjusting those assumptions How heterogenous contract goods affect supply and demand markets information technology and accordingly the theories of contractors and owners How interaction influences the production process and how land as a production factor changes the production function How ex ante costs determine the cost theory of the contractor and why contracting is more akin to the service sector than the goods sector Advanced undergraduate and masters students lecturers and academics in construction and related disciplines and professionals in the construction industry looking for expert analysis into a unique facet of the field will find Construction Microeconomics to be a valuable complete and authoritative reference on the subject

Building Economics Ivor H. Seeley, 1996-11-11 This comprehensively rewritten updated and extended new edition of this established text focuses on what has become the most important single facet of the quantity surveyor's role cost management The scope of the book has been broadened to take account of the widening and more sophisticated cost management and control service that clients now require The book examines the factors influencing building costs and how the precontract costs can be estimated analysed and controlled to ensure that buildings can be completed within the agreed budget and timescale and be of acceptable quality function effectively and provide value for money A new chapter on value management has been added together with an introductory chapter on cost modelling the chapter on life cycling costing is extended while the sections on energy conservation and occupancy costs are expanded Throughout the text many new case studies with supporting tables and diagrams are included in order to enhance the value of this book to the student and the practitioner

Routledge Handbook of Integrated Project Delivery Derek Walker, Steve Rowlinson, 2019-07-26 The concept of integrated project delivery IPD has evolved as a result of the need for highly expert teams of people to collaborate to deliver extremely complex projects to manage expectations about delivery speed changes in governance standards and to take advantage of and manage expectations raised by rapid advances in technology All this demands effective change management This is the first Handbook to contextualise and thematically explore the concept with an emphasis on rigorous practical and theoretical validation The Handbook is divided into five sections each with a focus on several interconnected themes including An introduction to IPD concepts The foundational elements and characteristics of IPD People culture and collaboration as key ingredients to successful and effective IPD Technology and process aspects of relational contracting

forms such as IPD New and relevant perspectives to IPD that have received scant attention to date Aspects and emerging issues that are rarely consciously considered in traditional project delivery due to the commercial imperative that drives firms and client organisations The Handbook offers both discussions of these key themes and also in depth research into construction and other industry project procurement and delivery that spans decades In addition the Handbook presents best and better practice but also includes insights into cutting edge experimental developments in technology and practices where proof of concept is currently being developed into emerging practice Contributing authors in this Handbook collaborate with the co editors to draw together an integrated set of chapters that align to deliver a coherent narrative of the IPD concept It is an invaluable reference for practitioners and academics alike and useful as core course content for numerous degree programs of study and professional development courses

Strategic Integrated Program Delivery Mark Betts, Peter E.D. Love, Derek H.T. Walker, 2024-12-04 This book outlines a cutting edge form of program delivery which the authors term SIP Form or Strategic Integrated Program delivery Using the Melbourne Level Crossing Removal Program LXRP consisting of the removal of 85 dangerous level crossings throughout metropolitan Melbourne including rail station upgrades signalling and track work and other associated capital works as an exemplar the book sets out four features that the authors argue define the SIP form concept as follows The organisation delivers a program of projects many using an IPD contract variant form such as a Project Alliance Agreement PAA in Australia and numerous other countries or the Integrated Form of Agreement IFoA in North America The contract form adopted is used and has been strategically designed to accommodate the project's risk and uncertainty profile as is the case with the LXRP Projects within the program are integrated with some being concurrently delivered with coordination across the projects in a coherent and highly purposeful manner Projects are not included that do not strategically fit the overall program delivery strategy There is a strategy for learning and innovation diffusion across projects concurrently and sequentially Lessons to be learned are learned through designed in governance mechanisms The LXRP is a potentially unique program of projects and the book takes the reader on a journey through this complex program and after giving the background and relevant context covers topics such as strategy governance procurement collaboration program alliance HRM leadership digital innovation continuous improvement community engagement and performance measurement This detailed analysis of such a complex program of projects makes this book essential reading for project managers engineers and advanced students of project delivery and management

Making Sense of Construction Improvement Stuart Green, 2023-12-15 Making Sense of Construction Improvement provides a critical evaluation of the construction improvement debate from the end of the Second World War through to the modern era The book offers unique insights into the way the UK construction sector is continuously shaped and re shaped in accordance with changes in the prevailing political economy This second edition brings the book up to date by including coverage of key trends from 2010 2023 The book has been substantially revised and reworked to include new material

relating to the age of austerity and the subsequent period of political uncertainty initiated by the Brexit referendum Changes in the political economy are positioned alongside the rise of the sustainability agenda and the advent of zero carbon Particular attention is paid to the ongoing skills crisis and the over hyped advocacy of modern methods of construction MMC as the latest supposed panacea of industry improvement Coverage includes the Farmer 2016 report Modernise or Die and the Construction Playbook HM Government 2020 However perhaps the most important addition is a focus on the Grenfell Disaster 2017 and the subsequent revelations from the public enquiry Further intermediate milestones include Building a Safer Future Hackitt 2018 and the Construction Sector Deal HM Government 2018 The emerging consensus points towards a systemic failure involving not only the construction sector but also the entire system of regulation and compliance Tracing the failings back over time and scrutinising the role played by previous generations of policymakers Stuart Green ultimately argues that Grenfell was a disaster entirely foretold The insightful and critical analysis of the industry contained within these pages is essential and timely reading for anyone who wants to understand how the construction sector arrived at where it is today and with that knowledge give further thought to where it might go next

Property Development David Cadman, Rosalyn Topping, 1995 This text on the commercial property development process is aimed at students of all disciplines related to the built environment It provides a practical overview of the process focusing on such things as land acquisition and planning
